H.G. WELLS

The Open Conspiracy

I. — THE PRESENT CRISIS IN HUMAN AFFAIRS

THE world is undergoing immense changes. Never before have the conditions of life changed so swiftly and enormously as they have changed for mankind in the last fifty years. We have been carried along—with no means of measuring the increasing swiftness in the succession of events. We are only now beginning to realize the force and strength of the storm of change that has come upon us.

These changes have not come upon our world from without. No meteorite from outer space has struck our planet; there have been no overwhelming outbreaks of volcanic violence or strange epidemic diseases; the sun has not flared up to excessive heat or suddenly shrunk to plunge us into Arctic winter. The changes have come through men themselves. Quite a small number of people, heedless of the ultimate consequence of what they did, one man here and a group there, have made discoveries and produced and adopted inventions that have changed all the condition, of social life.

We are now just beginning to realize the nature of these changes, to find words and phrases for them and put them down. First they began to happen, and then we began to see that they were happening. And now we are beginning to see how these changes are connected together and to get the measure of their consequences. We are getting our minds so clear about them that soon we shall be able to demonstrate them and explain them to our children in our schools. We do not do so at present. We do not give our children a chance of discovering that they live in a world of universal change.

What are the broad lines upon which these alterations of condition are proceeding?

It will be most convenient to deal with them in the order in which they came to be realized and seen clearly, rather than by the order in which they came about or by their logical order. They are more or less interdependent changes; they overlap and interact.

It was only in the beginning of the twentieth century that people began to realize the real significance of that aspect of our changing conditions to which the phrase "the abolition of distance" has been applied. For a whole century before that there had been a continual increase in the speed and safety of travel and transport and the ease and swiftness with which messages could be transmitted, but this increase had not seemed to be a matter of primary importance. Various results of railway, steamship, and telegraph became manifest; towns grew larger, spreading into the

countryside, once inaccessible lands became areas of rapid settlement and cultivation, industrial centres began to live on imported food, news from remote parts lost its time-lag and tended to become contemporary, but no one hailed these things as being more than "improvements" in existing conditions. They are not observed to be the beginnings of a profound revolution in the life of mankind. The attention of young people was not drawn to them; no attempt was made, or considered necessary, to adapt political and social institutions to this creeping enlargement of scale.

Until the closing years of the nineteenth century there was no recognition of the real state of affairs. Then a few observant people began, in a rather tentative, commentary sort of way, to call attention to what was happening. They did not seem to be moved by the idea that something had to be done about it; they merely remarked, brightly and intelligently, that it was going on. And then they went on to the realization that this "abolition of distance" was only one aspect of much more far-reaching advances.

Men were travelling about so much faster and flashing their communications instantly about the world because a progressive conquest of force and substance was going on. Improved transport was only one of a number of portentous consequences of that conquest; the first to be conspicuous and set men thinking; but not perhaps the first in importance. It dawned upon them that in the last hundred years there had been a stupendous progress in obtaining and utilizing mechanical power, a vast increase in the efficiency of mechanism, and associated with that an enormous increase in the substances available for man's purposes, from vulcanized rubber to the modern steels, and from petroleum and margarine to tungsten and aluminium. At first the general intelligence was disposed to regard these things as lucky "finds," happy chance discoveries. It was not apprehended that the shower of finds was systematic and continuous. Popular writers told about these things but they told of them at first as "Wonders"—"Wonders" like the Pyramids, the Colossus of Rhodes, and the Great Wall of China. Few realized how much more they were than any "Wonders." The "Seven Wonders of the World" left men free to go on living, toiling, marrying, and dying as they had been accustomed to for immemorial ages. If the "Seven Wonders" had vanished or been multiplied three score it would not have changed the lives of any large proportion of human beings. But these new powers and substances were modifying and transforming—unobtrusively, surely, and relentlessly—very particular of the normal life of mankind.

They increased the amount of production and the methods of production. They made possible "Big-Business," to drive the small producer and the small distributor out of the market. They swept away factories and evoked new ones. They changed the face of the fields. They brought into the normal

life, thing by thing and day by day, electric light and heating, bright cities at night, better aeration, new types of clothing, a fresh cleanliness. They changed a world where there had never been enough into a world of potential plenty, into a world of excessive plenty. It dawned upon their minds after their realization of the "abolition of distance" that shortage of supplier had also been abolished and that irksome toil was no longer necessary to produce everything material that man might require. It is only in the last dozen years that this broader and profounder fact has come through to the intelligence of any considerable number of people. Most of them have still to carry their realization a step farther and see how complete is the revolution in the character of the daily life these things involve.

But there are still other changes outside this vast advance in the pace and power of material life. The biological sciences have undergone a corresponding extension. Medical art has attained a new level of efficiency, so that in all the modernizing societies of the world the average life is prolonged, and there is, in spite of a great fall in the birth rate, a steady, alarming increase in the world's population. The proportion of adults alive is greater than it has ever been before. Fewer and fewer human beings die young. This has changed the social atmosphere about us. The tragedy of lives cut short and ended prematurely is passing out of general experience. Health becomes prevalent. The continual toothaches, headaches, rheumatism, neuralgias, coughs, colds, indigestions that made up so large a part of the briefer lives of our grandfathers and grandmothers fade out of experience. We may all live now, we discover, without any great burthen of fear, wholesomely and abundantly, for as long as the desire to live is in us.

But we do not do so. All this possible freedom of movement, this power and abundance, remains for most of us no more than possibility. There is a sense of profound instability about these achievements of our race. Even those who enjoy, enjoy without security, and for the great multitude of mankind there is neither ease, plenty, nor freedom. Hard tasks, insufficiency, and unending money worries are still the ordinary stuff of life. Over everything human hangs the threat of such war as man has never known before, were armed and reinforced by all the powers and discoveries of modern science.

When we demand why the achievement of power turns to distress and danger in our hands, we get some very unsatisfactory replies. The favourite platitude of the politician excusing himself for the futilities of his business, is that "moral progress has not kept pace with material advance." That seems to satisfy him completely, but it can satisfy no other intelligent person. He says "moral." He leaves that word unexplained. Apparently he wants to shift the responsibility to our religious teachers. At the most he has made but the vaguest gesture towards a reply. And yet, when we consider it,

charitably and sympathetically, there does seem to be a germ of reality in that phrase of his.

What does moral mean? Mores means manners and customs. Morality is the conduct of life. It is what we do with our social lives. It is how we deal with ourselves in relation to our fellow creatures. And there does seem to be a much greater discord now than there was (say) a couple of hundred years ago between the prevailing ideas of how to carry on life and the opportunities and dangers of the time. We are coming to see more and more plainly that certain established traditions which have made up the frame of human relationships for ages are not merely no longer as convenient as they were, but are positively injurious and dangerous. And yet at present we do not know how to shake off these traditions, these habits of social behaviour which rule us. Still less are we able to state, and still less bring into operation, the new conceptions of conduct and obligation that must replace them.

For example, the general government of human affairs has hitherto been distributed among a number of sovereign states—there are about seventy of them now—and until recently that was a quite tolerable system of frameworks into which a general way of living could be fitted. The standard of living may not have been as high as our present standards, but the social stability and assurance were greater. The young were trained to be loyal, law-regarding, patriotic, and a defined system of crimes and misdemeanours with properly associated pains, penalties, and repressions, kept the social body together. Everyone was taught a history glorifying his own state, and patriotism was chief among the Virtues. Now, with great rapidity, there has been that "abolition of distance," and everyone has become next-door neighbour to everyone else. States once separate, social and economic systems formerly remote from one another, now jostle each other exasperatingly. Commerce under the new conditions is perpetually breaking nationalist bounds and making militant raids upon the economic life of other countries. This exacerbates patriotism in which we have all been trained and with which we are all, with scarcely an exception, saturated. And meanwhile war, which was once a comparative slow bickering upon a front, has become war in three dimensions; it gets at the "non-combatant" almost as searchingly as at the combatant, and has acquired weapons of a stupendous cruelty and destructiveness. At present there exists no solution to this paradoxical situation. We are continually being urged by our training and traditions to antagonisms and conflicts that will impoverish, starve, and destroy both our antagonists and ourselves. We are all trained to distrust and hate foreigners, salute our flag, stiffen up in a wooden obedient way at our national anthem, and prepare to follow the little fellows in spurs and feathers who pose as the heads of our states into the most horrible common

destruction. Our political and economic ideas of living are out of date, and we find great difficulty in adjusting them and reconstructing them to meet the huge and strenuous demands of the new times. That is really what our gramophone politicians have in mind—in the vague way in which they have anything in mind—when they put on that well-worn record about moral progress not having kept pace with material inventions.

Socially and politically we want a revised system of ideas about conduct, a view of social and political life brought up to date. We are not doing the effective thing with our lives, we are drifting, we are being hoodwinked and bamboozled and misled by those who trade upon the old traditions. It is preposterous that we should still be followed about and pestered by war, taxed for war preparations, and threatened bodily and in our liberties by this unnecessary and exaggerated and distorted survival of the disunited world of the pre-scientific era. And it is not simply that our political way of living is now no better than an inherited defect and malformation, but that our everyday life, our eating and drinking and clothing and housing and going about, is also cramped, thwarted, and impoverished, because we do not know how to set about shaking off the old ways and fitting the general life to our new opportunities. The strain takes the form of increased unemployment and a dislocation of spending power. We do not know whether to spend or save. Great swarms of us find ourselves unaccountably thrown out of work. Unjustly, irrationally. Colossal business reconstructions are made to increase production and accumulate profits, and meanwhile the customers with purchasing power dwindle in numbers and fade away. The economic machine creaks and makes every sign of stopping—and its stopping means universal want and starvation. It must not stop. There must be a reconstruction, a change-over. But what sort of a change-over?

Though none of us are yet clear as to the precise way in which this great change-over is to be effected, there is a world-wide feeling now that change-over or a vast catastrophe is before us. Increasing multitudes participate in that uneasy sense of insecure transition. In the course of one lifetime mankind has passed from a state of affairs that seems to us now to have been slow, dull, ill-provided, and limited, but at least picturesque and tranquil-minded, to a new phase of excitement, provocation, menace, urgency, and actual or potential distresses. Our lives are part of one another. We cannot get away from it. We are items in a social mass. What are we to do with our lives?

II. — THE IDEA OF THE OPEN CONSPIRACY

I AM a writer upon social and political matters. Essentially I am a very ordinary, undistinguished person. I have a mediocre brain, a very average brain, and the way in which my mind reacts to these problems is therefore very much the way in which most brains will react to them. But because it is my business to write and think about these questions, because on that account I am able to give more time and attention to them than most people, I am able to get rather ahead of my equals and to write articles and books just a little before the ideas I experience become plain to scores of thousands, and then to hundreds of thousands, and at last to millions of other people. And so it happened that a few years ago (round about 1927) I became very anxious to clear up and give form to a knot of suggestions that seemed to me to have in them the solution of this riddle of adapting our lives to the immense new possibilities and the immense new dangers that confront mankind.

It seemed to me that all over the world intelligent people were waking up to the indignity and absurdity of being endangered, restrained, and impoverished, by a mere uncritical adhesion to traditional governments, traditional ideas of economic life, and traditional forms of behaviour, and that these awaking intelligent people must constitute first a protest and then a creative resistance to the inertia that was stifling and threatening us. These people I imagined would say first, "We are drifting; we are doing nothing worth while with our lives. Our lives are dull and stupid and not good enough."

Then they would say, "What are we to do with our lives?"

And then, "Let us get together with other people of our sort and make over the world into a great world-civilization that will enable us to realize the promises and avoid the dangers of this new time."

It seemed to me that as, one after another, we woke up, that is what we should be saying. It amounted to a protest, first mental and then practical, it amounted to a sort of unpremeditated and unorganized conspiracy, against the fragmentary and insufficient governments and the wide-spread greed, appropriation, clumsiness, and waste that are now going on. But unlike conspiracies in general this widening protest and conspiracy against established things would, by its very nature, go on in the daylight, and it would be willing to accept participation and help from every quarter. It would, in fact, become an "Open Conspiracy," a necessary, naturally evolved conspiracy, to adjust our dislocated world.

I made various attempts to develop this idea. I published a little book called *The Open Conspiracy* as early as 1928, into which I put what I had in my

mind at that time. It was an unsatisfactory little book even when I published it, not quite plain enough and not quite confident enough, and evidently unsure of its readers. I could not find out how to do it better at the time, and it seemed in its way to say something of living and current interest, and so I published it—but I arranged things so that I could withdraw it in a year or so. That I did, and this present book is a largely rewritten version, much clearer and more explicit. Since that first publication we have all got forward surprisingly. Events have hustled thought along and have been hustled along by thought. The idea of reorganizing the affairs of the world on quite a big scale, which was "Utopian," and so forth, in 1926 and 1927, and still "bold" in 1928, has now spread about the world until nearly everybody has it. It has broken out all over the place, thanks largely to the mental stimulation of the Russian Five Year Plan. Hundreds of thousands of people everywhere are now thinking upon the lines foreshadowed by my Open Conspiracy, not because they had ever heard of the book or phrase, but because that was the way thought was going.

The first Open Conspiracy conveyed the general idea of a world reconstructed, but it was very vague about the particular way in which this or that individual life could be lived in relation to that general idea. It gave a general answer to the question, "What are we to do with our lives?" It said, "Help to make over the New World amidst the confusions of the Old." But when the question was asked, "What am I to do with my life?" the reply was much less satisfactory.

The intervening years of thought and experience make it possible, now, to bring this general idea of a reconstructive effort, an attempt to build up a new world within the dangers and disharmonies of our present state, into a much closer and more explicit relation to the individual "Open Conspirator." We can present the thing in a better light and handle it with a surer touch.

III. — WE HAVE TO CLEAR AND CLEAN UP OUR MINDS

Now, one thing is fairly plain to most of us who are waking up to the need of living our lives in a new way and of making over the state, which is the framework of our lives, to meet the new demands upon it, and that is, that we have to put our own minds in order. Why have we only awakened now to the crisis in human affairs. The changes in progress have been going on with a steady acceleration for a couple of centuries. Clearly we must all have been very unobservant, our knowledge as it came to us must have been very badly arranged in our minds, and our way of dealing with it must have been cloudy and muddled, or else we should surely have awakened long ago to the immense necessities that now challenge us. And if that is so, if it has taken decades to rouse us, then quite probably we are not yet completely awake. Even now we may not have realized the job before us in its completeness. We may still have much to get plain in our minds, and we certainly have much more to learn. One primary and permanent duty therefore is to go on with our thinking and to think as well as we can about the way in which we think and about the ways in which we get and use knowledge.

Fundamentally the Open Conspiracy must be an intellectual rebirth.

Human thought is still very much confused by the imperfection of the words and other symbols it employs and the consequences of this confused thinking are much more serious and extensive than is commonly realized. We still see the world through a mist of words; it is only the things immediately about us that are plain fact. Through symbols, and especially through words, man has raised himself above the level of the ape and come to a considerable mastery over his universe. But every step in his mental ascent has involved entanglement with these symbols and words he was using; they were at once helpful and very dangerous and misleading. A great part of our affairs, social, political, intellectual, is in a perplexing and dangerous state to-day because of our loose, uncritical, slovenly use of words.

All through the later Middle Ages there were great disputes among the schoolmen about the use of words and symbols. There is a queer disposition in the human mind to think that symbols and words and logical deductions are truer than actual experiences, and these great controversies were due to the struggle of the human intelligence against that disposition. On the one side were the Realists, who were so called because they believed, in effect, that names were more real than facts, and on the other side were the Nominalists, who from the first were pervaded by a suspicion about names and words generally; who thought there might be some sort of catch in verbal processes, and who gradually worked their way towards verification

by experiment which is the fundamental thing about experimental science—experimental science which has given our human world all these immense powers and possibilities that tempt and threaten it to-day. These controversies of the schoolmen were of the utmost importance to mankind. The modern world could not begin to come into existence until the human mind had broken away from the narrow-minded verbalist way of thinking which the Realists followed.

But all through my education I never had this matter explained to me. The University of London intimated that I was a soundly educated young man by giving me a degree in first-class honours and the liberty to acquire and wear an elegant gown and hood, and the London College of Preceptors gave me and the world its highest assurances that I was fit to educate and train the minds of my fellow creatures, and yet I had still to discover that a Realist was not a novelist who put rather too highly flavoured sex appeal into his books, and a Nominalist, nothing in particular. But it had crept into my mind as I learnt about individuality in my biological work and about logic and psychology in my preparation as the perfect preceptor, that something very important and essential was being left out and that I wasn't at all as well equipped as my diplomas presently said I was, and in the next few years I found the time to clean up this matter pretty thoroughly. I made no marvellous discoveries, everything I found out was known already; nevertheless, I had to find out some of this stuff for myself quite over again, as though it had never been done; so inaccessible was any complete account of human thinking to an ordinary man who wanted to get his mind into proper working condition. And this was not that I had missed some recondite, precious refinements of philosophy; it was that my fundamental thinking, at the very root of my political and social conduct, was wrong. I was in a human community, and that community, and I with it, was thinking of phantoms and fantasies as though they were real and living things, was in a reverie of unrealities, was blind, slovenly, hypnotized, base and ineffective, blundering about in an extremely beautiful and an extremely dangerous world.

I set myself to re-educate myself, and after the practice of writers wrote it in various trial pamphlets, essays, and books. There is no need to refer to these books here. The gist of the matter is set out in three compilations, to which I shall refer again almost immediately. They are *The Outline of History* (Ch. XXI, § 6, and Ch. XXXIII, § 6), *The Science of Life* (Book VIII, on Thought and Behaviour) and *The Work, Wealth, and Happiness of Mankind* (Ch. II, § § 1-4). In the last, it is shown quite plainly how man has had to struggle for the mastery of his mind, has discovered only after great controversies the proper and effective use of his intellectual tools, and has had to learn to avoid certain widespread traps and pitfalls before he could

achieve his present mastery over matter. Thinking clearly and effectively does not come by nature. Hunting the truth is an art. We blunder naturally into a thousand misleading generalizations and false processes. Yet there is hardly any intelligent mental training done in the schools of the world to-day. We have to learn this art, if we are to practise it at all. Our schoolteachers have had no proper training themselves, they miseducate by example and precept, and so it is that our press and current discussions are more like an impromptu riot of crippled and deaf and blind minds than an intelligent interchange of ideas. What bosh one reads! What rash and impudent assumptions! What imbecile inferences!

But re-educating oneself, getting one's mind into health and exercising it and training it to think properly, is only the beginning of the task before the awakening Open Conspirator. He has not only to think clearly, but he has to see that his mind is equipped with the proper general ideas to form a true framework for his everyday judgments and decisions.

It was the Great War first brought home to me how ignorant I was, and how ill-finished and untidy my mind, about the most important things of life. That disastrous waste of life, material and happiness, since it was practically world wide, was manifestly the outcome of the processes that constitute the bulk of history, and yet I found I did not know—and nobody else seemed to know—history in such a fashion as to be able to explain how the Great War came about or what ought to come out of it. "Versailles," we all seem to be agreed nowadays, was silly, but how could Versailles be anything else than what it was in view of the imperfect, lopsided, historical knowledge and the consequent suspicion, emotion, and prejudice of those who assembled there. They did not know any better than the rest of us what the war was, and so how could they know what the peace ought to be? I perceived that I was in the same case with everyone else, and I set myself first of all for my own guidance to make a summary of all history and get some sort of map to more serviceable conclusions about the political state of mankind. This summary I made was *The Outline of History*, a shameless compilation and arrangement of the main facts of the world story, written without a touch of art or elegance, written indeed in a considerable hurry and excitement, and its sale, which is now in the third million, showed how much I had in common with a great dispersed crowd of ordinary people, all wanting to know, all disgusted with the patriotic, litigious twaddling gossipy stuff given them as history by their schoolmasters and schoolmistresses which had led them into the disaster of the war.

The Outline of History is not a whole history of life. Its main theme is the growth of human intercommunication and human communities and their rulers and conflicts, the story of how and why the myriads of little tribal systems of ten thousand years ago have fought and coalesced into the sixty-

or seventy-odd governments of to-day and are now straining and labouring in the grip of forces that must presently accomplish their final unison. And even as I completed *The Outline*, I realized that there remained outside its scope wider and more fundamental, and closer, more immediate fields of knowledge which I still had to get in order for my own practical ends and the ends of like-minded people who wanted to use their lives effectively, if my existence was to escape futility.

I realized that I did not know enough about the life in my body and its relations to the world of life and matter outside it to come to proper decisions about a number of urgent matters—from race conflicts, birth control, and my private life, to the public control of health and the conservation of natural resources. And also, I found, I was astonishingly ignorant about the everyday business of life, the how and why of the miner who provided the coal to cook my dinner, and the banker who took my money in return for a cheque-book, and the shopkeeper from whom I bought things, and the policeman who kept the streets in order for me. Yet I was voting for laws affecting my relations with these people, paying them directly or indirectly, airing my ignorant opinions about them, and generally contributing by my behaviour to sustain and affect their lives.

So with the aid and direction of two very competent biologists I set to work to get out as plain and clear a statement as possible of what was known about the sources and nature of life and the relation of species to individuals and to other species, and the processes of consciousness and thought. This I published as *The Science of Life*. And while this was going on I set myself to the task of making a review of all human activities in relation to each other, the work of people and the needs of people, cultivation, manufacture, trade, direction, government, and all. This was the most difficult part of this attempt to get a rational account of the modern world, and it called for the help and counsel of a great variety of people. I had to ask and find some general answer to the question, "What are the nineteen hundred-odd million human beings who are alive to-day doing, and how and why are they doing it?" It was, in fact, an outline of economic, social, and political science, but since, after *The Outline of History*, the word "outline" has been a good deal cheapened by various enterprising publishers, I have called it, *The Work, Wealth, and Happiness of Mankind*.

Now, I find, by getting these three correlated compilations into existence, I have at last, in however rough a fashion, brought together a complete system of ideas upon which an Open Conspirator can go. Before anyone could hope to get on to anything like a practical working directive answer to "What are we to do with our lives?" it was necessary to know what our lives were—*The Science of Life*; what had led up to their present pattern—*The Outline of History*; and this third book, to tell what we were actually doing

and supposed to be doing with our working lives, day by day, at the present time. By the time I was through with these books I felt I had really something sound and comprehensive to go upon, an "ideology," as people say, on which it was possible to think of building a new world without fundamental surprises, and, moreover, that I had got my mind stripped down and cleaned of many illusions and bad habits, so that it could handle life with an assurance it had never known before.

There is nothing marvellous about these compilations of mine. Any steady writer of average intelligence with the same will and the same resources, who could devote about nine or ten years to the task and get the Proper sort of help, could have made them. It can be done, it is no doubt being done, all over again by other people, for themselves and perhaps for others, much more beautifully and adequately. But to get that amount of vision and knowledge, to achieve that general arrangement and understanding, was a necessary condition that had to be satisfied before any answer to the question, "What are we to do with our lives?" could even be attempted, and before one could become in any effective way an Open Conspirator.

There is nothing indispensable even now, I repeat, about these three particular books. I know about them and refer to them because I put them together myself and so they are handy for me to explain myself. But most of what they contain can be extracted from any good encyclopædia. Any number of people have made similar outlines of history for themselves, have read widely, grasped the leading principles of biology and grappled with the current literature of business science and do not in the least need my particular summary. So far as history and biology are concerned there are parallel books, that are as good and serviceable. Van Loon's books for example. Yet even for highly-educated people these summaries may be useful in bringing things known with different degrees of thoroughness, into a general scheme. They correlate, and they fill up gaps. Between them they cover the ground; and in some fashion that ground has to be covered before the mind of a modern citizen is prepared to tackle the problems that confront it. Otherwise he is an incapable citizen, he does not know where he is and where the world is, and if he is rich or influential he may be a very dangerous citizen indeed. Presently there will be far better compilations to meet this need, or perhaps the gist of all the three divisions of knowledge, concentrated and made more lucid and attractive, may be available as the intellectual frame of modern education throughout the world, as a "General Account of Life" that should be given to everyone.

But certainly no one can possibly set about living properly and satisfactorily unless he knows what he is, where he is, and how he stands to the people and things about him.

IV. — THE REVOLUTION IN EDUCATION

SOME sort of reckoning therefore between people awakened to the new world that dawns about us and the schools, colleges, and machinery of formal education is overdue. As a body the educated are getting nothing like that Account of Life which is needed to direct our conduct in this modern world.

It is the crowning absurdity in the world to-day that these institutions should go through a solemn parade of preparing the new generation for life and that then, afterwards, a minority of their victims, finding this preparation has left them almost totally unprepared, should have of their own accord to struggle out of our world heap of starved and distorted minds to some sort of real education. The world cannot be run by such a minority of escaped and re-educated minds alone, with all the rest of the heap against them. Our necessities demand the intelligence and services of everyone who can be trained to give them. The new world demands new schools, therefore, to give everyone a sound and thorough mental training and equip everyone with clear ideas about history, about life, and about political and economic relationships instead of the rubbishy head-content at present prevalent. The old-world teachers and schools have to be reformed or replaced. A vigorous educational reform movement arises as a natural and necessary expression of the awakening Open Conspirator. A revolution in education is the most imperative and fundamental part of the adaptation of life to its new conditions.

These various compendia of knowledge constituting a Modern Account of Life, on which we have laid stress in the previous section, these supplements to teaching, which are now produced and read outside the established formal educational world and in the teeth of its manifest hostility) arise because of the backwardness of that world, and as that world yields slowly but surely to the pressure of the new spirit, so they will permeate and replace its text-books and disappear as a separate class of book. The education these new dangerous times in which we are now living demands, must start right, from the beginning and there must be nothing to replace and nothing to relearn in it. Before we can talk politics, finance, business, or morals, we must see that we have got the right mental habits and the right foundation of realized facts. There is nothing much to be done with our lives until we have seen to that.

V. — RELIGION IN THE NEW WORLD

"YES," objects a reader, "but does not our religion tell us what we are to do with our lives?"

We have to bring religion, as its fundamental matter, into this discussion. From our present point of view, religion is that central essential part of education which determines conduct. Religion certainly should tell us what to do with our lives. But in the vast stir and occasions of modern life, so much of what we call religion remains irrelevant or dumb. Religion does not seem to "join on" to the main parts of the general problem of living. It has lost touch.

Let us try and bring this problem of the Open Conspiracy to meet and make the new world, into relation with the traditions of religion. The clear-minded Open Conspirator who has got his modern ideology, his lucidly arranged account of the universe in order, is obliged to believe that only by giving his life to the great processes of social reconstruction, and shaping his conduct with reference to that, can he do well with his life. But that merely launches him into the most subtle and unending of struggles, the struggle against the incessant gravitation of our interests to ourselves. He has to live the broad life and escape from the close narrow life. We all try to attain the dignity and happiness of magnanimity and escape from the tormenting urgencies of personal desire. In the past that struggle has generally assumed the form of a religious struggle. Religion is the antagonist of self.

In their completeness, in the life that was professionally religious, religions have always demanded great subordinations of self. Therein lay their creative force. They demanded devotion and gave reasons for that demand. They disentangled the will from the egotistical preoccupations, often very completely. There is no such thing as a self-contained religion, a private religious solo. Certain forms of Protestantism and some mystical types come near to making religion secluded duet between the individual and his divinity, but here that may be regarded as a perversion of the religious impulse. Just as the normal sexual complex excites and stirs the individual out of his egotism to serve the ends of the race, so the normal religious process takes the individual out of his egotism for the service of the community. It is not a bargain, a "social contract," between the individual and the community; it is a subordination of both the existing individual and the existing community in relation to something, a divinity, a divine order, a standard, a righteousness, more important than either. What is called in the phraseology of certain religions "conviction of sin" and "the flight from the City of Destruction" are familiar instances of this reference of the self-centred individual and the current social life to something far better than either the one or the other.

This is the third element in the religious relationship, a hope, a promise, an objective which turns the convert not only from himself but from the "world," as it is, towards better things. First comes self disregard then service, and then this reconstructive creative urgency.

For the finer sort of mind this aspect of religion seems always to have been its primary attraction. One has to remember that there is a real will for religion scattered throughout mankind—a real desire to get away from self. Religion has never pursued its distinctive votaries; they have come to meet it. The desire to give oneself to greater ends than the everyday life affords, and to give oneself freely, is clearly dominant in that minority, and traceable in an incalculable proportion of the majority.

But hitherto religion has never been presented simply as a devotion to a universal cause. The devotion has always been in it, but it has been complicated by other considerations. The leaders in every great religious movement have considered it necessary that it should explain itself in the form of history and a cosmogony. It has been felt necessary to say Why? and To what end? Every religion therefore has had to adopt the physical conceptions, and usually also to assume many of the moral and social values, current at the time of its formation. It could not transcend the philosophical phrases and attitudes that seemed then to supply the natural frame for a faith, nor draw upon anything beyond the store of scientific knowledge of its time. In this lurked the seeds of the ultimate decay and supersession of every successive religion.

But as the idea of continual change, going farther and farther from existing realities and never returning to them, is a new one, as nobody until very recently has grasped the fact that the knowledge of today is the ignorance of to-morrow, each fresh development of religion in the world so far has been proclaimed in perfect good faith as the culminating and final truth.

This finality of statement has considerable immediate practical value. The suggestion of the possibility of further restatement is an unsettling suggestion; it undermines conviction and breaks the ranks of the believers, because there are enormous variations in the capacities of men to recognize the same spirit under a changing shape. These variations cause endless difficulties to-day. While some intelligences can recognize the same God under a variety of names and symbols without any severe strain, others cannot even detect the most contrasted Gods one from the other provided they wear the same mask and title. It appears a perfectly natural and reasonable thing to many minds to restate religion now in terms of biological and psychological necessity, while to others any variation whatever in the phrasing of the faith seems to be nothing less than atheistical misrepresentations of the most damnable kind. For these latter God a God

still anthropomorphic enough to have a will and purpose to display preferences and reciprocate emotions, to be indeed in person, must be retained until the end of time. For others, God can be thought of as a Great First Cause, as impersonal and inhuman as atomic structure.

It is because of the historical and philosophical commitments they have undertaken, and because of concessions made to common human weaknesses in regard to such once apparently minor but now vital moral issues as property, mental activity, and public veracity—rather than of any inadequacy in their adaptation to psychological needs—that the present wide discredit of organized religions has come about. They no longer seem even roughly truthful upon issues of fact, and they give no imperatives over large fields of conduct in which perplexity is prevalent. People will say, "I could be perfectly happy leading the life of a Catholic devotee if only I could believe." But most of the framework of religious explanation upon which that life is sustained is too old-fashioned and too irrelevant to admit of that thoroughness of belief which is necessary for the devotion of intelligent people.

Great ingenuity has been shown by modern writers and thinkers in the adaptation of venerated religious expressions to new ideas. Peccavi. [Usu. translated 'I have sinned'—RW] Have I not written of the creative will in humanity as "God the Invisible King" and presented it in the figure of a youthful and adventurous finite god?

The word "God" is in most minds so associated with the concept of religion that it is abandoned only with the greatest reluctance. The word remains, though the idea is continually attenuated. Respect for Him demands that He should have no limitations. He is pushed farther and farther from actuality, therefore, and His definition becomes increasingly a bundle of negations, until at last, in His rôle of The Absolute, He becomes an entirely negative expression. While we can speak of good, say some, can speak of God. God is the possibility of goodness, the good side of things. If phrases in which the name of God is used are to be abandoned, they argue, religion will be left speechless before many occasions.

Certainly there is something beyond the individual that is and the world that is; on that we have already insisted as a characteristic of all religions; that persuasion is the essence of faith and the key to courage. But whether that is to be considered, even after the most strenuous exercises in personification, as a greater person or a comprehensive person, is another matter. Personality is the last vestige of anthropomorphism. The modern urge to a precise veracity is against such concessions to traditional expression.

On the other hand there is in many fine religious minds a desire amounting almost to a necessity for an object of devotion so individualized as to be capable at least of a receptive consciousness even if no definite response is conceded. One type of mind can accept a reality in itself which another must project and dramatize before it can comprehend it and react to it. The human soul is an intricate thing which will not endure elucidation when that passes beyond a certain degree of harshness and roughness. The human spirit has learnt love, devotion, obedience and humility in relation to other personalities, and with difficulty it takes the final step to a transcendent subordination, from which the last shred of personality has stripped.

In matters not immediately material, language has to work by metaphors, and though every metaphor carries its own peculiar risks of confusion, we cannot do without them. Great intellectual tolerance is necessary, therefore --a cultivated disposition --to translate and retranslate from one metaphysical or emotional idiom to another—if there is not to be a deplorable wastage of moral force in our world. Just now I wrote *Peccavi* because I had written *God the Invisible King*, but after all I do not think it was so much a sin to use that phrase, *God the Invisible King*, as an error in expression. If there is no sympathetic personal leader outside us, there is at least in us the attitude we should adopt towards a sympathetic personal leader.

Three profound differences between the new mental dispositions of the present time and those of preceding ages have to be realized if current developments of the religious impulse are to be seen in their correct relationship to the religious life of the past. There has been a great advance in the analysis of psychic processes and the courage with which men have probed into the origins of human thought and feeling. Following upon the biological advances that have made us recognize fish and amphibian in the bodily structure of man, have come these parallel developments in which we see elemental fear and lust and self-love moulded, modified, and exalted, under the stress of social progress, into intricate human motives. Our conception of sin and our treatment of sin have been profoundly modified by this analysis. Our former sins are seen as ignorances, inadequacies and bad habits, and the moral conflict is robbed of three-fourths of its ego-centred melodramatic quality. We are no longer moved to be less wicked; we are moved to organize our conditioned reflexes and lead a life less fragmentary and silly.

Secondly, the conception of individuality has been influenced and relaxed by biological thought, so that we do not think so readily of the individual *contra mundum* as our fathers did. We begin to realize that we are egotists by misapprehension. Nature cheats the self to serve the purposes of the species

by filling it with wants that war against its private interests. As our eyes are opened to these things, we see ourselves as beings greater or less than the definitive self. Man's soul is no longer his own. It is, he discovers, part of a greater being which lived before he was born and will survive him. The idea of a survival of the definite individual with all the accidents and idiosyncrasies of his temporal nature upon him dissolves to nothing in this new view of immortality.

The third of the main contrasts between modern and former thought which have rendered the general shapes of established religion old-fashioned and unserviceable is a reorientation of current ideas about time. The powerful disposition of the human mind to explain everything as the inevitable unfolding of a past event which, so to speak, sweeps the future helplessly before it, has been checked by a mass of subtle criticisms. The conception of progress as a broadening and increasing purpose, a conception which is taking hold of the human imagination more and more firmly, turns religious life towards the future. We think no longer of submission to the irrevocable decrees of absolute dominion, but of participation in an adventure on behalf of a power that gains strength and establishes itself. The history of our world, which has been unfolded to us by science, runs counter to all the histories on which religions have been based. There was no Creation in the past, we begin to realize, but eternally there is creation; there was no Fall to account for the conflict of good and evil, but a stormy ascent. Life as we know it is a mere beginning.

It seems unavoidable that if religion is to develop unifying and directive power in the present confusion of human affairs it must adapt itself to this forward-looking, individuality-analyzing turn of mind; it must divest itself of its sacred histories, its gross preoccupations, its posthumous prolongation of personal ends. The desire for service, for subordination, for permanent effect, for an escape from the distressful pettiness and mortality of the individual life, is the undying element in every religious system.

The time has come to strip religion right down to that, to strip it for greater tasks than it has ever faced before. The histories and symbols that served our fathers encumber and divide us. Sacraments and rituals harbour disputes and waste our scanty emotions. The explanation of why things are is an unnecessary effort in religion. The essential fact in religion is the desire for religion and not how it came about. If you do not want religion, no persuasions, no convictions about your place in the universe can give it to you. The first sentence in the modern creed must be, not "I believe," but "I give myself."

To what? And how? To these questions we will now address ourselves.

VI. — MODERN RELIGION IS OBJECTIVE

To give oneself religiously is a continuing operation expressed in a series of acts. It can be nothing else. You cannot dedicate yourself and then go away to live just as you have lived before. It is a poor travesty of religion that does not produce an essential change in the life which embraces it. But in the established and older religions of our race, this change of conduct has involved much self-abasement merely to the God or Gods, or much self-mortification merely with a view to the moral perfecting of self. Christian devotion, for example, in these early stages, before the hermit life gave place to organized monastic life, did not to any extent direct itself to service except the spiritual service of other human beings. But as Christianity became a definite social organizing force, it took on a great series of healing, comforting, helping, and educational activities.

The modern tendency has been and is all in the direction of minimizing what one might call self-centred devotion and self-subjugation, and of expanding and developing external service. The idea of inner perfectibility dwindles with the diminishing importance attached to individuality. We cease to think of mortifying or exalting or perfecting ourselves and seek to lose ourselves in a greater life. We think less and less of "conquering" self and more and more of escaping from self. If we attempt to perfect ourselves in any respect it is only as a soldier sharpens and polishes an essential weapon.

Our quickened apprehension of continuing change, our broader and fuller vision of the history of life, disabuse our minds of many limitations set to the imaginations of our predecessors. Much that they saw as fixed and determinate, we see as transitory and controllable. They saw life fixed in its species and subjected to irrevocable laws. We see life struggling insecurely but with a gathering successfulness for freedom and power against restriction and death. We see life coming at last to our tragic and hopeful human level. Unprecedented possibilities, mighty problems, we realize, confront mankind to-day. They frame our existences. The practical aspect, the material form, the embodiment of the modernized religious impulse is the direction of the whole life to the solution of these problems and the realization of their possibilities. The alternative before man now is either magnificence of spirit and magnificence of achievement, or disaster.

The modern religious life, like all forms of religious life, must needs have its own subtle and deep inner activities, its meditations, its self-confrontations, its phases of stress and search and appeal, its serene and prayerful moods, but these inward aspects do not come into the scope of this present inquiry, which is concerned entirely with the outward shape, the direction, and the organization of modern religious effort, with the question of what, given religious devotion, we have to do and how that has to be done.

Now, in the new and greater universe to which we are awakening, its immense possibilities furnish an entirely new frame and setting for the moral life. In the fixed and limited outlook of the past, practical good works took the form mainly of palliative measures against evils that were conceived of as incurable; the religious community nursed the sick, fed the hungry, provided sanctuary for the fugitive, pleaded with the powerful for mercy. It did not dream of preventing sickness, famine, or tyranny. Other-worldliness was its ready refuge from the invincible evil and confusion of the existing scheme of things.

But it is possible now to imagine an order in human affairs from which these evils have been largely or entirely eliminated. More and more people are coming to realize that such an order is a material possibility. And with the realization that this is a material possibility, we can no longer be content with a field of "good deeds" and right action restricted to palliative and consolatory activities. Such things are merely "first aid." The religious mind grows bolder than it has ever been before. It pushes through the curtain it once imagined was a barrier. It apprehends its larger obligations. The way in which our activities conduce to the realization of that conceivable better order in human affairs, becomes the new criterion of conduct. Other-worldliness has become unnecessary.

The realization of this possible better order brings us at once to certain definite lines of conduct. We have to make an end to war, and to make an end to war we must be cosmopolitan in our politics. It is impossible for any clear-headed person to suppose that the ever more destructive stupidities of war can be eliminated from human affairs until some common political control dominates the earth, and unless certain pressures due to the growth of population, due to the enlarging scope of economic operations or due to conflicting standards and traditions of life, are disposed of.

To avoid the positive evils of war and to attain the new levels of prosperity and power that now come into view, an effective world control, not merely of armed force, but of the production and main movements of staple commodities and the drift and expansion of population is required. It is absurd to dream of peace and world-wide progress without that much control. These things assured the abilities and energies of a greatly increased proportion of human beings could be diverted to the happy activities of scientific research and creative work, with an ever-increasing release and enlargement of human possibility. On the political side it is plain that our lives must be given to the advancement of that union.

Such a forward stride in human life, the first stride in a mighty continuing advance, an advance to which no limit appears, is now not simply materially possible. It is urgent. The opportunity is plain before mankind. It is the

alternative to social decay. But there is no certainty, no material necessity, that it should ever be taken. It will not be taken by mankind inadvertently. It can only be taken through such an organization of will and energy to take it as this world has never seen before.

These are the new imperatives that unfold themselves before the more alert minds of our generation. They will presently become the general mental background, as the modern interpretations of the history of life and of the material and mental possibilities about us establish themselves. Evil political, social, and economic usages and arrangements may seem obdurate and huge, but they are neither permanent nor uncontrollable. They can be controlled, however, only by an effort more powerful and determined than the instincts and inertias that sustain them. Religion, modern and disillusioned, has for its outward task to set itself to the control and direction of political, social, and economic life. If it does not do that, then it is no more than a drug for easing discomfort, "the opium of the peoples."

Can religion, or can it not, synthesize the needed effort to lift mankind out of our present disorders, dangers, baseness, frustrations, and futilities to a phase of relative security, accumulating knowledge, systematic and continuing growth in power and the widespread, deep happiness of hopeful and increasing life?

Our answer here is that the religious spirit, in the light of modern knowledge, can do this thing, and our subject now is to enquire what are the necessary opening stages in the synthesis of that effort. We write, from this point onward, for those who believe that it can, and who do already grasp the implications of world history and contemporary scientific achievement.

VII. — WHAT MANKIND HAS TO DO

BEFORE we can consider the forms and methods of attacking this inevitable task of reconstruction it will be well to draw the main lines and to attempt some measure of the magnitude of that task. What are the new forms that it is thus proposed to impose upon human life, and how are they to be evolved from or imposed upon the current forms? And against what passive and active resistances has this to be done?

There can be no pause for replacement in the affairs of life. Day must follow day, and the common activities continue. The new world as a going concern must arise out of the old as a going concern.

Now the most comprehensive conception of this new world is of one politically, socially, and economically unified. Within that frame fall all the other ideas of our progressive ambition. To this end we set our faces and seek to direct our lives. Many there are at present who apprehend it as a possibility but do not dare, it seems, to desire it, because of the enormous difficulties that intervene, and because they see as yet no intimations of a way through or round these difficulties. They do not see a way of escape from the patchwork of governments that grips them and divides mankind. The great majority of human beings have still to see the human adventure as one whole; they are obsessed by the air of permanence and finality in established things; they accept current reality as ultimate reality. As the saying goes, they take the world as they find it.

But here we are writing for the modern-minded, and for them it is impossible to think of the world as secure and satisfactory until there exists a single world commonweal, preventing war and controlling those moral, biological, and economic forces and wastages that would otherwise lead to wars. And controlling them in the sense that science and man's realization and control of his powers and possibilities continually increase.

Let us make clear what sort of government we are trying to substitute for the patchwork of to-day. It will be a new sort of direction with a new psychology. The method of direction of such a world commonweal is not likely to imitate the methods of existing sovereign states. It will be something new and altogether different.

This point is not yet generally realized. It is too often assumed that the world commonweal will be, as it were, just the one heir and survivor of existing states, and that it will be a sort of megatherium of the same form and anatomy as its predecessors.

But a little reflection will show that this is a mistake. Existing states are primarily militant states, and a world state cannot be militant. There will be little need for president or king to lead the marshalled hosts of humanity, for

where there is no war there is no need of any leader to lead hosts anywhere, and in a polyglot world a parliament of mankind or any sort of council that meets and talks is an inconceivable instrument of government. The voice will cease to be a suitable vehicle. World government, like scientific process, will be conducted by statement, criticism, and publication that will be capable of efficient translation.

The fundamental organization of contemporary states is plainly still military, and that is exactly what a world organization cannot be. Flags, uniforms, national anthems, patriotism sedulously cultivated in church and school, the brag, blare, and bluster of our competing sovereignties, belong to the phase of development the Open Conspiracy will supersede. We have to get clear of that clutter. The reasonable desire of all of us is that we should have the collective affairs of the world managed by suitably equipped groups of the most interested, intelligent, and devoted people, and that their activities should be subjected to a free, open, watchful criticism, restrained from making spasmodic interruptions but powerful enough to modify or supersede without haste or delay whatever is weakening or unsatisfactory in the general direction.

A number of readers will be disposed to say that this is a very vague, undefined, and complicated conception of world government. But indeed it is a simplification. Not only are the present governments of the world a fragmentary competitive confusion, but none of them is as simple as it appears. They seem to be simple because they have formal heads and definite forms, councils, voting assemblies, and so forth, for arriving at decisions. But the formal heads, the kings, presidents, and so forth, are really not the directive heads. They are merely the figure heads. They do not decide. They merely make gestures of potent and dignified acquiescence when decisions are put to them. They are complicating shams. Nor do the councils and assemblies really decide. They record, often very imperfectly and exasperatingly, the accumulating purpose of outer forces. These outer really directive forces are no doubt very intricate in their operation; they depend finally on religious and educational forms and upon waves of gregarious feeling, but it does not in the least simplify the process of collective human activity to pretend that it is simple and to set up symbols and dummies in the guise of rulers and dictators to embody that pretence. To recognize the incurable intricacy of collective action is a mental simplification; to remain satisfied with the pretensions of existing governmental institutions, and to bring in all the problems of their procedure and interaction is to complicate the question.

The present rudimentary development of collective psychology obliges us to be vague and provisional about the way in which the collective mind may best define its will for the purpose of administrative action. We may know

that a thing is possible and still be unable to do it as yet, just as we knew that aviation was possible in 1900. Some method of decision there must certainly be and a definite administrative machinery. But it may turn out to be a much slighter, less elaborate organization than a consideration of existing methods might lead us to imagine. It may never become one single interlocking administrative system. We may have systems of world control rather than a single world state. The practical regulations, enforcements, and officials needed to keep the world in good health, for example may be only very loosely related to the system of controls that will maintain its communications in a state of efficiency. Enforcement and legal decisions, as we know them now, may be found to be enormously and needlessly cumbrous by our descendants. As the reasonableness of a thing is made plain, the need for its enforcement is diminished, and the necessity for litigation disappears.

The Open Conspiracy, the world movement for the supercession or enlargement or fusion of existing political, economic, and social institutions must necessarily, as it grows, draw closer and closer to questions of practical control. It is likely in its growth to incorporate many active public servants and many industrial and financial leaders and directors. It may assimilate great masses of intelligent workers. As its activities spread it will work out a whole system of special methods of co-operation. As it grows, and by growing, it will learn the business of general direction and how to develop its critical function. A lucid, dispassionate, and immanent criticism is the primary necessity, the living spirit of a world civilization. The Open Conspiracy is essentially such a criticism, and the carrying out of such a criticism into working reality is the task of the Open Conspiracy. It will by its very nature be aiming not so much to set up a world direction, as to become itself a world direction, and the educational and militant forms of its opening phase will evoke, step by step, as experience is gained and power and responsibility acquired, forms of administration and research and correlation.

The differences in nature and function between the world controls of the future and the state governments of the present age which we have just pointed out favours a hope that the Open Conspiracy may come to its own in many cases rather by the fading out of these state governments through the inhibition and paralysis of their destructive militant and competitive activities than by a direct conflict to overthrow them. As new world controls develop, it becomes the supreme business of the Open Conspiracy to keep them world wide and impartial, to save them by an incessant critical educational and propagandist activity from entanglement with the old traditional rivalries and feuds of states and nations. It is quite possible that such world controls should be able to develop independently, but it is highly

probable, on the other hand, that they will continue to be entangled as they are to-day, and that they will need to be disengaged with a struggle. We repeat, the new directive organizations of men's affairs will not be of the same nature as old-fashioned governments. They will be in their nature biological, financial, and generally economic, and the old governments were primarily nothing of the sort. Their directive force will be (1) an effective criticism having the quality of science, and (2) the growing will in men to have things right. The directive force of the older governments was the uncriticized fantasies and wilfulness of an individual, a class, a tribe, or a majority.

The modernization of the religious impulse leads us straight to this effort for the establishment of the world state as a duty, and the close consideration of the necessary organization of that effort will bring the reader to the conclusion that a movement aiming at the establishment of a world directorate, however restricted that movement may be at first in numbers and power, must either contemplate the prospect of itself developing into a world directorate, and by the digestion and assimilation of superseded factors into an entire modern world community, or admit from the outset the futility, the spare-time amateurishness, of its gestures.

VIII. — BROAD CHARACTERISTICS OF A SCIENTIFIC WORLD COMMONWEAL

CONTINUING our examination of the practical task before the modern mind, we may next note the main lines of contemporary aspiration within this comprehensive outline of a world commonweal. Any sort of unification of human affairs will not serve the ends we seek. We aim at a particular sort of unification; a world Caesar is hardly better from the progressive viewpoint than world chaos; the unity we seek must mean a world-wide liberation of thought, experiment and creative effort.

A successful Open Conspiracy merely to seize governments and wield and retain world power would be at best only the empty frame of success. It might be the exact reverse of success. Release from the threat of war and from the waste of international economic conflicts is a poor release if it demands as its price the loss of all other liberties.

It is because we desire a unification of human direction, not simply for the sake of unity, but as a means of release to happiness and power, that it is necessary, at any cost—in delay, in loss of effective force, in strategic or tactical disadvantage—that the light of free, abundant criticism should play upon that direction and upon the movements and unifying organizations leading to the establishment of that unifying direction.

Man is an imperfect animal and never quite trustworthy in the dark. Neither morally nor intellectually is he safe from lapses. Most of us who are past our first youth know how little we can trust ourselves and glad to have our activities checked and guarded by a sense of helpful inspection. It is for this reason that a movement to realize the conceivable better state of the world must deny itself the advantages of secret methods and tactical insincerities. It must leave that to its adversaries. We must declare our end plainly from the outset and risk no misunderstandings of our procedure.

The Open Conspiracy against the traditional and now cramping and dangerous institutions of the world must be an Open Conspiracy and cannot remain righteous otherwise. It is lost if it goes underground. Every step to world unity must be taken in the daylight with the understanding sympathy of as many people as possible, or the sort of unity that will be won will be found to be scarcely worth the winning. The essential task would have to be recommenced again within the mere frame of unity thus attained.

This candid attempt to take possession of the whole world, this Open Conspiracy of ours, must be made in the name of and for the sake of science and creative activity. Its aim is to release science and creative activity and every stage in the struggle must be watched and criticized, lest there be any sacrifice of these ends to the exigencies of conflict.

The security of creative progress and creative activity implies a competent regulation of the economic life in the collective interest. There must be food, shelter and leisure for all. The fundamental needs of the animal life must be assured before human life can have free play. Man does not live by bread alone; he eats that he may learn and adventure creatively, but unless he eats he cannot adventure. His life is primarily economic, as a house is primarily a foundation, and economic justice and efficiency must underlie all other activities; but to judge human society and organize political and social activities entirely on economic grounds is to forget the objectives of life's campaign in a preoccupation with supply.

It is true that man, like the animal world in general from which he has risen, is the creature of a struggle for sustenance, but unlike the animals, man can resort to methods of escape from that competitive pressure upon the means of subsistence, which has been the lot of every other animal species. He can restrain the increase in his numbers, and he seems capable of still quite undefined expansions of his productivity per head of population. He can escape therefore from the struggle for subsistence altogether with a surplus of energy such as no other kind of animal species has ever possessed. Intelligent control of population is a possibility which puts man outside competitive processes that have hitherto ruled the modification of species, and he can be released from these processes in no other way.

There is a clear hope that, later, directed breeding will come within his scope, but that goes beyond his present range of practical achievement, and we need not discuss it further here. Suffice it for us here that the world community of our desires, the organized world community conducting and ensuring its own progress, requires a deliberate collective control of population as a primary condition.

There is no strong instinctive desire for multitudinous offspring, as such, in the feminine make-up. The reproductive impulses operate indirectly. Nature ensures a pressure of population through passions and instincts that, given sufficient knowledge, intelligence, and freedom on the part of women, can be satisfactorily gratified and tranquillized, if need be, without the production of numerous children. Very slight adjustments in social and economic arrangements will, in a world of clear available knowledge and straightforward practice in these matters, supply sufficient inducement or discouragement to affect the general birth rate or the birth rate of specific types as the directive sense of the community may consider desirable. So long as the majority of human beings are begotten involuntarily in lust and ignorance so long does man remain like any other animal under the moulding pressure of competition for subsistence. Social and political processes change entirely in their character when we recognize the

possibility and practicability of this fundamental revolution in human biology.

In a world so relieved, the production of staple necessities presents a series of problems altogether less distressful than those of the present scramble for possessions and self-indulgence on the part of the successful, and for work and a bare living on the part of the masses. With the increase of population unrestrained, there was, as the end of the economic process, no practical alternative to a multitudinous equality at the level of bare subsistence, except through such an inequality of economic arrangements as allowed a minority to maintain a higher standard of life by withholding whatever surplus of production it could grasp, from consumption in mere proletarian breeding. In the past and at present, what is called the capitalist system, that is to say the unsystematic exploitation of production by private owners under the protection of the law, has, on the whole, in spite of much waste and conflict, worked beneficially by checking that gravitation to a universal low-grade consumption which would have been the inevitable outcome of a socialism oblivious of biological processes. With effective restraint upon the increase of population, however, entirely new possibilities open out before mankind.

The besetting vice of economic science, orthodox and unorthodox alike, has been the vice of beginning in the air, with current practice and current convictions, with questions of wages, prices, values, and possession, when the profounder issues of human association are really not to be found at all on these levels. The primary issues of human association are biological and psychological, and the essentials of economics are problems in applied physics and chemistry. The first thing we should examine is what we want to do with natural resources, and the next, how to get men to do what has to be done as pleasurably and effectively as possible. Then we should have a standard by which to judge the methods of to-day.

But the academic economists, and still more so Marx and his followers, refuse to deal with these fundamentals, and, with a stupid pose of sound practical wisdom, insist on opening up their case with an uncritical acceptance of the common antagonism of employers and employed and a long rigmarole about profits and wages. Ownership and expropriated labour are only one set of many possible sets of economic method.

The economists, however, will attend seriously only to the current set; the rest they ignore; and the Marxists, with their uncontrollable disposition to use nicknames in the place of judgments, condemn all others as "Utopian"—a word as final in its dismissal from the minds of the elect as that other pet counter in the Communist substitute for thought, "Bourgeois." If they can persuade themselves that an idea or a statement is "Utopian" or "Bourgeois,"

it does not seem to matter in the least to them whether it is right or wrong. It is disposed of. Just as in genteeler circles anything is disposed of that can be labelled "atheistical", "subversive" or "disloyal."

If a century and a half ago the world had submitted its problems of transport to the economists, they would have put aside, with as little wasted breath and ink as possible, all talk about railways, motorcars, steamships, and aeroplanes, and, with a fine sense of extravagance rebuked, set themselves to long neuralgic dissertations, disputations, and treatises upon highroads and the methods of connecting them, turnpike gates, canals, influence of lock fees on bargemen, tidal landing places, anchorages, surplus carrying capacity, carriers, caravans, hand-barrows, and the pedestrianariat. There would have been a rapid and easy differentiation in feeling and requirements between the horse-owning minority and the walking majority; the wrongs of the latter would have tortured the mind of every philosopher who could not ride, and been minimized by every philosopher who could; and there would have been a broad rift between the narrow-footpath school, the no-footpath school, and the school which would look forward to a time when every horse would have to be led along one universal footpath under the dictatorship of the pedestrianariat. All with the profoundest gravity and dignity. These things, footpaths and roads and canals with their traffic, were "real," and "Utopian" projects for getting along at thirty or forty miles an hour or more uphill and against wind and tide, let alone the still more incredible suggestion of air transport, would have been smiled and sneered out of court. Life went about on its with a certain assistance from wheels, or floated, rowed and was blown about on water; so it had been—and so it would always be.

The psychology of economic co-operation is still only dawning, and so the economists and the doctrinaire socialists have had the freest range for pedantry and authoritative pomp. For a hundred years they have argued and argued about "rent," about "surplus value," and so on, and have produced a literature ten thousand times as bulky, dreary, and foolish as the worst outpourings of the mediaeval schoolmen.

But as soon as this time-honoured preoccupation with the allotment of the shares of originators, organizers, workers, owners of material, credit dealers, and tax collectors in the total product, ceases to be dealt with as the primary question in economics; as soon as we liberate our minds from a preoccupation which from the outset necessarily makes that science a squabble rather than a science, and begin our attack upon the subject with a survey of the machinery and other productive material required in order that the staple needs of mankind should be satisfied, if we go on from that to consider the way in which all this material and machinery can be worked and the product distributed with the least labour and the greatest possible

satisfaction, we shift our treatment of economic questions towards standards by which all current methods of exploitation, employment, and finance can be judged rather than wrangled over. We can dismiss the question of the claims of this sort of participant or that, for later and subordinate consideration, and view each variety of human assistance in the general effort entirely from the standpoint of what makes that assistance least onerous and most effective.

The germs of such really scientific economics exist already in the study of industrial organization and industrial psychology. As the science of industrial psychology in particular develops, we shall find all this discussion of ownership, profit, wages, finance, and accumulation, which has been treated hitherto as the primary issues of economics, falling into place under the larger enquiry of what conventions in these matters, what system of money and what conceptions of property, yield the greatest stimulus and the least friction in that world-wide system of co-operation which must constitute the general economic basis to the activities of a unified mankind.

Manifestly the supreme direction of the complex of human economic activities in such a world must centre upon a bureau of information and advice, which will take account of all the resources of the planet, estimate current needs, apportion productive activities and control distribution. The topographical and geological surveys of modern civilized communities, their government maps, their periodic issue of agricultural and industrial statistics, are the first crude and unco-ordinated beginnings of such an economic world intelligence. In the propaganda work of David Lubin, a pioneer whom mankind must not forget, and in his International Institute of Agriculture in Rome, there were the beginnings of an impartial review month by month and year by year of world production, world needs and world transport. Such a great central organization of economic science would necessarily produce direction; it would indicate what had best be done here, there, and everywhere, solve general tangles, examine, approve and initiate fresh methods and arrange the transitional process from old to new. It would not be an organization of will, imposing its will upon a reluctant or recalcitrant race; it would be a direction, just as a map is a direction.

A map imposes no will on anyone, breaks no one in to its "policy." And yet we obey our maps.

The will to have the map full, accurate, and up to date, and the determination to have its indications respected, would have to pervade the whole community. To nourish and sustain that will must be the task not of any particular social or economic division of the community, but of the whole body of right-minded people in that community. The organization and preservation of that power of will is the primary undertaking, therefore, of a

world revolution aiming at universal peace, welfare and happy activity. And through that will it will produce as the central organ the brain of the modern community, a great encyclopædic organization, kept constantly up to date and giving approximate estimates and directions for all the material activities of mankind.

The older and still prevalent conception of government is bullying, is the breaking-in and subjugation of the "subject," to the God, or king, or lords of the community. Will-bending, the overcoming of the recalcitrant junior and inferior, was an essential process in the establishment of primitive societies, and its tradition still rules our education and law. No doubt there must be a necessary accommodation of the normal human will to every form of society; no man is innately virtuous; but compulsion and restraint are the friction of the social machine and, other things being equal, the less compulsive social arrangements are, the more willingly, naturally, and easily they are accepted, the less wasteful of moral effort and the happier that community will be. The ideal state, other things being equal, is the state with the fewest possible number of will fights and will suppressions. This must be a primary consideration in arranging the economic, biological, and mental organization of the world community at which we aim.

We have advanced the opinion that the control of population pressure is practicable without any violent conflict with "human nature," that given a proper atmosphere of knowledge and intention, there need be far less suppression of will in relation to production than prevails to-day. In the same way, it is possible that the general economic life of mankind may be made universally satisfactory that there may be an abundance out of all comparison greater than the existing supply of things necessary for human well-being, freedom, and activity, with not merely not more, but infinitely less subjugation and enslavement than now occurs. Man is still but half born out of the blind struggle for existence, and his nature still partakes of the infinite wastefulness of his mother Nature. He has still to learn how to price the commodities he covets in terms of human life. He is indeed only beginning to realize that there is anything to be learnt in that matter. He wastes will and human possibility extravagantly in his current economic methods.

We know nowadays that the nineteenth century expended a great wealth of intelligence upon a barren controversy between Individualism and Socialism. They were treated as mutually exclusive alternatives, instead of being questions of degree. Human society has been is and always must be an intricate system of adjustments between unconditional liberty and the disciplines and subordinations of co-operative enterprise. Affairs do not move simply from a more individualist to a more socialist state or vice versa; there may be a release of individual initiative going on here and

standardization or restraint increasing there. Personal property never can be socially guaranteed as the extremer individualists desired, nor can it be "abolished" as the extremer socialists proposed. Property is not robbery, as Proudhon asserted; it is the protection of things against promiscuous and mainly wasteful use. Property is not necessarily personal. In some cases property may restrict or forbid a use of things that could be generally advantageous, and it may be and is frequently unfair in its assignment of initiative, but the remedy for that is not an abolition but a revision of property. In the concrete it is a form necessary for liberty of action upon material, while abstracted as money, which is a liquidated generalized form of property; it is a ticket for individual liberty of movement and individual choice of reward.

The economic history of mankind is a history of the operation of the idea of property; it relates the conflict of the unlimited acquisitiveness of egoistic individuals against the resentment of the disinherited and unsuccessful and the far less effective consciousness of a general welfare. Money grew out of a system of abstracting conventions and has been subjected to a great variety of restrictions, monopolizations, and regulations. It has never been an altogether logical device, and it has permitted the most extensive and complex developments of credit, debt, and dispossession. All these developments have brought with them characteristic forms of misuse and corruption. The story is intricate, and the tangle of relationships, of dependence, of pressure, of interception, of misdirected services, crippling embarrassments, and crushing obligations in which we live to-day admits of no such simple and general solutions as many exponents of socialism, for example, seem to consider possible.

But the thought and investigations of the past century or so have made it clear that a classification of property, according to the nature of the rights exercisable and according to the range of ownership involved, must be the basis of any system of social justice in the future.

Certain things, the ocean, the air, rare wild animals, must be the collective property of all mankind and cannot be altogether safe until they are so regarded, and until some concrete body exists to exercise these proprietary rights. Whatever collective control exists must protect these universal properties, the sea from derelicts, the strange shy things of the wild from extermination by the hunter and the foolish collector. The extinction of many beautiful creatures is one of the penalties our world is paying for its sluggishness in developing a collective common rule. And there are many staple things and general needs that now also demand a unified control in the common interest. The raw material of the earth should be for all, not to be monopolized by any acquisitive individual or acquisitive sovereign state, and not to be withheld from exploitation for the general benefit of any

chance claims to territorial priority of this or that backward or bargaining person or tribe.

In the past, most of these universal concerns have had to be left to the competitive enterprise of profit-seeking individuals because there were as yet no collectivities organized to the pitch of ability needed to develop and control these concerns, but surely nobody in his senses believes that the supply and distribution of staple commodities about the earth by irresponsible persons and companies working entirely for monetary gain is the best possible method from the point of view of the race as a whole. The land of the earth, all utilizable natural products, have fallen very largely under the rules and usages of personal property because in the past that was the only recognized and practicable form of administrative proprietorship. The development both of extensive proprietary companies and of government departments with economic functions has been a matter of the last few centuries, the development, that is to say, of communal, more or less impersonal ownership, and it is only through these developments that the idea of organized collectivity of proprietorship has become credible.

Even in quite modern state enterprises there is a tendency to recall the rôle of the vigilant, jealous, and primitive personal proprietor in the fiction of ownership by His Majesty the King. In Great Britain, for example, Georgius Rex is still dimly supposed to hover over the Postmaster General of his Post Office, approve, disapprove, and call him to account. But the Postal Union of the world which steers a registered letter from Chile to Norway or from Ireland to Peking is almost completely divorced from the convention of an individual owner. It works; it is criticized without awe or malice. Except for the stealing and steaming of letters practised by the political police of various countries, it works fairly well. And the only force behind it to keep it working well is the conscious common sense of mankind.

But when we have stipulated for the replacement of individual private ownership by more highly organized forms of collective ownership, subject to free criticism and responsible to the whole republic of mankind, in the general control of sea and land, in the getting, preparation, and distribution of staple products and in transport, we have really named all the possible generalizations of concrete ownership that the most socialistic of contemporaries will be disposed to demand. And if we add to that the necessary maintenance of a money system by a central world authority upon a basis that will make money keep faith with the worker who earns it, and represent from first to last for him the value in staple commodities he was given to understand it was to have, and if we conceive credit adequately controlled in the general interest by a socialized world banking organization, we shall have defined the entire realm from which individual property and unrestricted individual enterprise have been excluded. Beyond that, the

science of social psychology will probably assure us that the best work will be done for the world by individuals free to exploit their abilities as they wish. If the individual landowner or mineral-owner disappears altogether from the world, he will probably be replaced over large areas by tenants with considerable security of tenure, by householders and by licensees under collective proprietors. It will be the practice, the recognized best course, to allow the cultivator to profit as fully as possible by his own individual productivity and to leave the householder to fashion his house and garden after his own desire.

Such in the very broadest terms is the character of the world commonweal towards which the modern imagination is moving, so far as its direction and economic life are concerned. The organization of collective bodies capable of exercising these wider proprietorships, which cannot be properly used in the common interest by uncorrelated individual owners, is the positive practical problem before the intelligent portion of mankind to-day. The nature of such collective bodies is still a series of open questions, even upon such points as whether they will be elected bodies or groups deriving their authority from other sanctions. Their scope and methods of operation, their relations to one another and to the central bureau of intelligence, remain also to be defined. But before we conclude this essay we may be able to find precisions for at least the beginning of such definition.

Nineteenth-century socialism in its various forms, including the highly indurated formulae of communism, has been a series of projects for the establishment of such collective controls, for the most part very sketchy projects from which the necessary factor of a sound psychological analysis was almost completely wanting. Primarily movements of protest and revolt against the blazing injustices arising out of the selfishly individualistic exploitation of the new and more productive technical and financial methods of the eighteenth and nineteenth centuries, they have been apt to go beyond the limits of reasonable socialization in their demands and to minimize absurdly the difficulties and dangers of collective control. Indignation and impatience were their ruling moods, and if they constructed little they exposed much. We are better able to measure the magnitude of the task before us because of the clearances and lessons achieved by these pioneer movements.

IX. — NO STABLE UTOPIA IS NOW CONCEIVABLE

THIS unified world towards which the Open Conspiracy would direct its activities cannot be pictured for the reader as any static and stereotyped spectacle of happiness. Indeed, one may doubt if such a thing as happiness is possible without steadily changing conditions involving continually enlarging and exhilarating opportunities. Mankind, released from the pressure of population, the waste of warfare and the private monopolization of the sources of wealth, will face the universe with a great and increasing surplus of will and energy. Change and novelty will be the order of life; each day will differ from its predecessor in its great amplitude of interest. Life which was once routine, endurance, and mischance will become adventure and discovery. It will no longer be "the old, old story."

We have still barely emerged from among the animals in their struggle for existence. We live only in the early dawn of human self-consciousness and in the first awakening of the spirit of mastery. We believe that the persistent exploration of our outward and inward worlds by scientific and artistic endeavour will lead to developments of power and activity upon which at present we can set no limits nor give any certain form.

Our antagonists are confusion of mind, want of courage, want of curiosity and want of imagination, indolence, and spendthrift egotism. These are the enemies against which the Open Conspiracy arrays itself; these are the jailers of human freedom and achievement.

**X. — THE OPEN CONSPIRACY IS NOT TO BE
THOUGHT OF AS A SINGLE ORGANIZATION; IT IS A
CONCEPTION OF LIFE OUT OF WHICH EFFORTS,**

ORGANIZATIONS, AND NEW ORIENTATIONS WILL ARISE

THIS open and declared intention of establishing a world order out of the present patchwork of particularist governments, of effacing the militarist conceptions that have hitherto given governments their typical form, and of removing credit and the broad fundamental processes of economic life out of reach of private profit-seeking and individual monopolization, which is the substance of this Open Conspiracy to which the modern religious mind must necessarily address its practical activities, cannot fail to arouse enormous opposition. It is not a creative effort in a clear field; it is a creative effort that can hardly stir without attacking established things. It is the repudiation of drift, of "leaving things alone." It criticizes everything in human life from the top to the bottom and finds everything not good enough. It strikes at the universal human desire to feel that things are "all right."

One might conclude, and it would be a hasty, unsound conclusion, that the only people to whom we could look for sympathy and any passionate energy in forwarding the revolutionary change would be the unhappy, the discontented, the dispossessed, and the defeated in life's struggle. This idea lies at the root of the class-war dogmas of the Marxists, and it rests on an entirely crude conception of human nature. The successful minority is supposed to have no effective motive but a desire to retain and intensify its advantages. A quite imaginary solidarity to that end is attributed to it, a preposterous, base class activity. On the other hand, the unsuccessful mass—"proletariat"—is supposed to be capable of a clear apprehension of its disadvantages, and the more it is impoverished and embittered, the clearer-minded it becomes, and the nearer draws its uprising, its constructive "dictatorship," and the Millennium.

No doubt a considerable amount of truth is to be found in this theory of the Marxist revolution. Human beings, like other animals, are disposed to remain where their circumstances are tolerable and to want change when they are uncomfortable, and so a great proportion of the people who are "well off" want little or no change in present conditions, particularly those who are too dull to be bored by an unprogressive life, while a great proportion of those who actually feel the inconveniences of straitened means and population pressure, do. But much vaster masses of the rank and file of humanity are accustomed to inferiority and dispossession, they do not feel these things to the extent even of desiring change, or even if they do feel

their disadvantages, they still fear change more than they dislike their disadvantages. Moreover, those who are sufficiently distressed to realize that "something ought to be done about it" are much more disposed to childish and threatening demands upon heaven and the government for redress and vindictive and punitive action against the envied fortunate with whom they happen to be in immediate contact, than to any reaction towards such complex, tentative, disciplined constructive work as alone can better the lot of mankind. In practice Marxism is found to work out in a ready resort to malignantly destructive activities, and to be so uncreative as to be practically impotent in the face of material difficulties. In Russia, where—in and about the urban centres, at least—Marxism has been put to the test, the doctrine of the Workers' Republic remains as a unifying cant, a test of orthodoxy of as little practical significance there as the communism of Jesus and communion with Christ in Christendom, while beneath this creed a small oligarchy which has attained power by its profession does its obstinate best, much hampered by the suspicion and hostility of the Western financiers and politicians, to carry on a series of interesting and varying successful experiments in the socialization of economic life. Here we have no scope to discuss the N.E.P. and the Five Year Plan. They are dealt with in *The Work, Wealth, and Happiness of Mankind*. Neither was properly Communist. The Five Year Plan is carried out as an autocratic state capitalism. Each year shows more and more clearly that Marxism and Communism are divagations from the path of human progress and that the line of advance must follow a course more intricate and less flattering to the common impulses of our nature.

The one main strand of truth in the theory of social development woven by Marx and Engels is that successful, comfortable people are disposed to dislike, obstruct and even resist actively any substantial changes in the current patchwork of arrangements, however great the ultimate dangers of that patchwork may be or the privations and sufferings of other people involved in it. The one main strand of error in that theory is the facile assumption that the people at a disadvantage will be stirred to anything more than chaotic and destructive expressions of resentment. If now we reject the error and accept the truth, we lose the delusive comfort of belief in that magic giant, the Proletariat, who will dictate, arrange, restore, and create, but we clear the way for the recognition of an élite of intelligent, creative-minded people scattered through the whole community, and for a study of the method of making this creative element effective in human affairs against the massive oppositions of selfishness and unimaginative self-protective conservatism.

Now, certain classes of people such as thugs and burglars seem to be harmful to society without a redeeming point about them, and others, such

as racecourse bookmakers, seem to provide the minimum of distraction and entertainment with a maximum of mischief. Wilful idlers are a mere burthen on the community. Other social classes again, professional soldiers, for example, have a certain traditional honourableness which disguises the essentially parasitic relationship of their services to the developing modern community. Armies and armaments are cancers produced by the malignant development of the patriotic virus under modern conditions of exaggeration and mass suggestion. But since there are armies prepared to act coercively in the world to-day, it is necessary that the Open Conspiracy should develop within itself the competence to resist military coercion and combat and destroy armies that stand in the way of its emergence. Possibly the first two types here instanced may be condemned as classes and excluded as classes from any participation in the organized effort to recast the world, but quite obviously the soldier cannot. The world commonweal will need its own scientific methods of protection so long as there are people running about the planet with flags and uniforms and weapons, offering violence to their fellow men and interfering with the free movements of commodities in the name of national sovereignty.

And when we come to the general functioning classes, landowners, industrial organizers, bankers, and so forth, who control the present system, such as it is, it should be still plainer that it is very largely from the ranks of these classes, and from their stores of experience and traditions of method, that the directive forces of the new order must emerge. The Open Conspiracy can have nothing to do with the heresy that the path of human progress lies through an extensive class war.

Let us consider, for example, how the Open Conspiracy stands to such a complex of activities, usages, accumulations, advantages as constitutes the banking world. There are no doubt many bankers and many practices in banking which make for personal or group advantage to the general detriment. They forestall, monopolize, constrain, and extort, and so increase their riches. And another large part of that banking world follows routine and established usage; it is carrying on and keeping things going, and it is neither inimical nor conducive to the development of a progressive world organization of finance. But there remains a residuum of original and intelligent people in banking or associated with banking or mentally interested in banking, who do realize that banking plays a very important, interesting part in the world's affairs, who are curious about their own intricate function and disposed towards a scientific investigation of its origins, conditions, and future possibilities. Such types move naturally towards the Open Conspiracy. Their enquiries carry them inevitably outside the bankers' habitual field to an examination of the nature, drift, and destiny of the entire economic process.

Now the theme of the preceding paragraph might be repeated with variations through a score of paragraphs in which appropriate modifications would adapt it to the industrial organizer, the merchant and organizer of transport, the advertiser, the retail distributor, the agriculturalist, the engineer, the builder, the economic chemist, and a number of other types functional in the contemporary community. In all we should distinguish firstly a base and harmful section, then a mediocre section following established usage, and lastly, an active, progressive section to whom we turn naturally for developments leading towards the progressive world commonweal of our desires. And our analysis might penetrate further than separation into types of individuals. In nearly every individual instance we should find a mixed composition, a human being of fluctuating moods and confused purposes, sometimes base, sometimes drifting with the tide and sometimes alert and intellectually and morally quickened. The Open Conspiracy must be content to take a fraction of a man, as it appeals to fractions of many classes, if it cannot get him altogether.

This idea of drawing together a proportion of all or nearly all the functional classes in contemporary communities in order to weave the beginnings of a world community out of their selection is a fairly obvious one—and yet it has still to win practical recognition. Man is a morbidly gregarious and partisan creature; he is deep in his immediate struggles and stands by his own kind because in so doing he defends himself; the industrialist is best equipped to criticize his fellow industrialist, but he finds the root of all evil in the banker; the wages worker shifts the blame for all social wrongs on the "employing class." There is an element of exasperation in most economic and social reactions, and there is hardly a reforming or revolutionary movement in history which is not essentially an indiscriminate attack of one functioning class or type upon another, on the assumption that the attacked class is entirely to blame for the clash and that the attacking class is self-sufficient in the commonweal and can dispense with its annoying collaborator. A considerable element of justice usually enters into such recriminations. But the Open Conspiracy cannot avail itself of these class animosities for its driving force. It can have, therefore, no uniform method of approach. For each class it has a conception of modification and development, and each class it approaches therefore at a distinctive angle. Some classes, no doubt, it would supersede altogether; others—the scientific investigator, for example—it must regard as almost wholly good and seek only to multiply and empower, but it can no more adopt the prejudices and extravagances of any particular class as its basis than it can adopt the claims of any existing state or empire.

When it is clearly understood that the binding links of the Open Conspiracy we have in mind are certain broad general ideas, and that—except perhaps

in the case of scientific workers—we have no current set of attitudes of mind and habits of activity which we can turn over directly and unmodified to the service of the conspiracy, we are in a position to realize that the movement we contemplate must from the outset be diversified in its traditions and elements and various in its methods. It must fight upon several fronts and with many sorts of equipment. It will have a common spirit, but it is quite conceivable that between many of its contributory factors there may be very wide gaps in understanding and sympathy. It is no sort of simple organization.

**XI. — FORCES AND RESISTANCES IN THE GREAT
MODERN COMMUNITIES NOW PREVALENT, WHICH ARE
ANTAGONISTIC TO THE OPEN CONSPIRACY.**

THE WAR WITH TRADITION

We have now stated broadly but plainly the idea of the world commonweal which is the objective of the Open Conspiracy, and we have made a preliminary examination of the composition of that movement, showing that it must be necessarily not a class development, but a convergence of many different sorts of people upon a common idea. Its opening task must be the elaboration, exposition, and propaganda of this common idea, a steady campaign to revolutionize education and establish a modern ideology in men's minds and, arising out of this, the incomparably vaster task of the realization of its ideas.

These are tasks not to be done in vacuo; they have to be done in a dense world of crowding, incessant, passionate, unco-ordinated activities, the world of market and newspaper, seed-time and harvest, births, deaths, jails, hospitals, riots, barracks and army manoeuvres, false prophets and royal processions, games and shows, fire, storm, pestilence, earthquake, war. Every day and every hour things will be happening to help or thwart, stimulate or undermine, obstruct or defeat the creative effort to set up the world commonweal.

Before we go on to discuss the selection and organization of these heterogeneous and mainly religious impulses upon which we rest our hopes of a greater life for mankind, before we plan how these impulses may be got together into a system of co-ordinated activities, it will be well to review the main antagonistic forces with which, from its very inception, the Open Conspiracy will be—is now—in conflict.

To begin with, we will consider these forces as they present themselves in the highly developed Western European States of to-day and in their American derivatives, derivatives which, in spite of the fact that in most cases they have far outgrown their lands of origin, still owe a large part of their social habits and political conceptions to Europe. All these States touch upon the Atlantic or its contributory seas; they have all grown to their present form since the discovery of America; they have a common tradition rooting in the ideas of Christendom and a generic resemblance of method. Economically and socially they present what is known in current parlance as the Capitalist system, but it will relieve us of a considerable load of disputatious matter if we call them here simply the "Atlantic" civilizations and communities.

The consideration of these Atlantic civilizations in relation to the coming world civilization will suffice for the present chapter. Afterwards we will consider the modification of the forces antagonistic to the Open Conspiracy as they display themselves beyond the formal confines of these now dominant states in the world's affairs, in the social systems weakened and injured by their expansion, and among such less highly organized communities as still survive from man's savage and barbaric past.

The Open Conspiracy is not necessarily antagonistic to any existing government. The Open Conspiracy is a creative, organizing movement and not an anarchistic one. It does not want to destroy existing controls and forms of human association, but either to supersede or amalgamate them into a common world directorate. If constitutions, parliaments, and kings can be dealt with as provisional institutions, trustees for the coming of age of the world commonweal, and in so far as they are conducted in that spirit, the Open Conspiracy makes no attack upon them.

But most governments will not set about their business as in any way provisional they and their supporters insist upon a reverence and obedience which repudiate any possibility of supersession. What should be an instrument becomes a divinity. In nearly every country of the world there is, in deference to the pretended necessities of a possible war, a vast degrading and dangerous cultivation of loyalty and mechanical subservience to flags, uniforms, presidents, and kings. A president or king who does his appointed work well and righteously is entitled to as much subservience as a bricklayer who does his work well and righteously and to no more, but instead there is a sustained endeavour to give him the privileges of an idol above criticism or reproach, and the organized worship of flags has become—with changed conditions of intercourse and warfare—an entirely evil misdirection of the gregarious impulses of our race. Emotion and sentimentality are evoked in the cause of disciplines and co-operations that could quite easily be sustained and that are better sustained by rational conviction.

The Open Conspiracy is necessarily opposed to all such implacable loyalties, and still more so to the aggressive assertion and propaganda of such loyalties. When these things take the form of suppressing reasonable criticism and forbidding even the suggestion of other forms of government, they become plainly antagonists to any comprehensive project for human welfare. They become manifestly, from the wider point of view, seditious, and loyalty to "king and country" passes into plain treason to mankind. Almost everywhere, at present, educational institutions organize barriers in the path of progress, and there are only the feeblest attempts at any counter education that will break up these barriers. There is little or no effort to restrain the aggressive nationalist when he waves his flag against the

welfare of our race, or to protect the children of the world from the infection of his enthusiasms. And this last is as true now of the American system as it is of any European State.

In the great mass of the modern community there is little more than a favourable acquiescence in patriotic ideas and in the worship of patriotic symbols, and that is based largely on such training. These things are not necessary things for the generality of to-day. A change of mental direction would be possible for the majority of people now without any violent disorganization of their intimate lives or any serious social or economic readjustments for them. Mental infection in such cases could be countered by mental sanitation. A majority of people in Europe, and a still larger majority in the United States and the other American Republics, could become citizens of the world without any serious hindrance to their present occupations, and with an incalculably vast increase of their present security.

But there remains a net of special classes in every community, from kings to custom-house officers, far more deeply involved in patriotism because it is their trade and their source of honour, and prepared in consequence with an instinctive resistance to any reorientation of ideas towards a broader outlook. In the case of such people no mental sanitation is possible without dangerous and alarming changes in their way of living. For the majority of these patriots by metier, the Open Conspiracy unlocks the gates leading from a fussy paradise of eminence, respect, and privilege,—and motions them towards an austere wilderness which does not present even the faintest promise of a congenial, distinguished life for them. Nearly everything in human nature will dispose them to turn away from these gates which open towards the world peace, to bang-to and lock them again if they can, and to grow thickets as speedily as possible to conceal them and get them forgotten. The suggestion of being trustees in a transition will seem to most of such people only the camouflage of an ultimate degradation.

From such classes of patriots by metier, it is manifest that the Open Conspiracy can expect only opposition. It may detach individuals from them, but only by depriving them of their essential class loyalties and characteristics. The class as a class will remain none the less antagonistic. About royal courts and presidential residences, in diplomatic, consular, military, and naval circles, and wherever people wear titles and uniforms and enjoy pride and precedences based on existing political institutions, there will be the completest general inability to grasp the need for the Open Conspiracy. These people and their womankind, their friends and connections, their servants and dependents, are fortified by time-honoured traditions of social usage, of sentiment and romantic prestige. They will insist that they are reality and Cosmopolis a dream. Only individuals of

exceptional liveliness, rare intellectual power, and innate moral force can be expected to break away from the anti-progressive habits such class conditions impose upon them.

This tangle of traditions and loyalties, of interested trades and professions, of privileged classes and official patriots, this complex of human beings embodying very easy and natural and time-honoured ideas of eternal national separation and unending international and class conflict, is the main objective of the Open Conspiracy in its opening phase. This tangle must be disentangled as the Open Conspiracy advances, and until it is largely disentangled and cleared up that Open Conspiracy cannot become anything very much more than a desire and a project.

This tangle of "necessary patriots," as one may call them, is different in its nature, less intricate and extensive proportionally in the United States and the States of Latin America, than it is in the old European communities, but it is none the less virulent in its action on that account. It is only recently that military and naval services have become important factors in American social life, and the really vitalizing contact of the interested patriot and the State has hitherto centred mainly upon the custom house and the concession. Instead of a mellow and romantic loyalty to "king and country" the American thinks simply of America and his flag.

The American exaggeration of patriotism began as a resistance to exploitation from overseas. Even when political and fiscal freedom were won, there was a long phase of industrial and financial dependence. The American's habits of mind, in spite of his recent realization of the enormous power and relative prosperity of the United States and of the expanding possibilities of their Spanish and Portuguese-speaking neighbours, are still largely self-protective against a now imaginary European peril. For the first three quarters of the nineteenth century the people of the American continent, and particularly the people of the United States, felt the industrial and financial ascendancy of Great Britain and had a reasonable fear of European attacks upon their continent. A growing tide of immigrants of uncertain sympathy threatened their dearest habits. Flag worship was imposed primarily as a repudiation of Europe. Europe no longer looms over America with overpowering intimations, American industries no longer have any practical justification for protection, American finance would be happier without it, but the patriotic interests are so established now that they go on and will go on. No American statesman who ventures to be cosmopolitan in his utterance and outlook is likely to escape altogether from the raucous attentions of the patriotic journalist.

We have said that the complex of classes in any country interested in the current method of government is sustained by traditions and impelled by its

nature and conditions to protect itself against exploratory criticism. It is therefore unable to escape from the forms of competitive and militant nationalism in which it was evolved. It cannot, without grave danger of enfeeblement, change any such innate form. So that while parallel complexes of patriotic classes are found in greater or less intricacy grouped about the flags and governments of most existing states, these complexes are by their nature obliged to remain separate, nationalist, and mutually antagonistic. You cannot expect a world union of soldiers or diplomatists. Their existence and nature depend upon the idea that national separation is real and incurable, and that war, in the long run, is unavoidable. Their conceptions of loyalty involve an antagonism to all foreigners, even to foreigners of exactly the same types as themselves, and make for a continual campaign of annoyances, suspicions, and precautions—together with a general propaganda, affecting all other classes, of the necessity of an international antagonism—that creeps persistently towards war.

But while the methods of provoking war employed by the patriotic classes are traditional, modern science has made a new and enormously more powerful thing of warfare and, as the Great War showed, even the most conservative generals on both sides are unable to prevent the gigantic interventions of the mechanic and the chemist. So that a situation is brought about in which the militarist element is unable to fight without the support of the modern industrial organization and the acquiescence of the great mass of people. We are confronted therefore at the present time with the paradoxical situation that a patriotic tradition sustains in power and authority warlike classes who are quite incapable of carrying on war. The other classes to which they must go for support when the disaster of war is actually achieved are classes developed under peace conditions, which not only have no positive advantage in war, but must, as a whole, suffer great dislocation, discomfort, destruction, and distress from war. It is of primary importance therefore, to the formally dominant classes that these new social masses and powers should remain under the sway of the old social, sentimental, and romantic traditions, and equally important is it to the Open Conspiracy that they should be released.

Here we bring into consideration another great complex of persons, interests, traditions—the world of education, the various religious organizations, and, beyond these, the ramifying, indeterminate world of newspapers and other periodicals, books, the drama, art, and all the instruments of presentation and suggestion that mould opinion and direct action. The sum of the operations of this complex will be either to sustain or to demolish the old nationalist militant ascendancy. Its easiest immediate course is to accept it. Educational organizations on that account are now largely a conservative force in the community; they are in most cases

directly controlled by authority and bound officially as well as practically to respect current fears and prejudices. It evokes fewer difficulties for them if they limit and mould rather than release the young. The schoolmaster tends, therefore, to accept and standardize and stereotype, even in the living, progressive fields of science and philosophy. Even there he is a brake on the forward movement. It is clear that the Open Conspiracy must either continually disturb and revivify him or else frankly antagonize him. Universities also struggle between the honourable past on which their prestige rests, and the need of adaptation to a world of enquiry, experiment, and change. It is an open question whether these particular organizations of intellectual prestige are of any real value in the living world. A modern world planned *de novo* would probably produce nothing like a contemporary university. Modern research, one may argue, would be stimulated rather than injured by complete detachment from the lingering mediaevalism of such institutions, their entanglement with adolescent education, and their ancient and contagious conceptions of precedence and honour.

Ordinary religious organizations, again, exist for self-preservation and are prone to follow rather than direct the currents of popular thought. They are kept alive, indeed, by revivalism and new departures which at the outlet they are apt to resist, as the Catholic Church, for instance, resisted the Franciscan awakening, but their formal disposition is conservative. They say to religious development, thus far and no farther.

Here, in school, college, and church, are activities of thought and instruction which, generally speaking, drag upon the wheels of progress, but which need not necessarily do so. A schoolmaster may be original, stimulating, and creative, and if he is fortunate and a good fighter he may even achieve considerable worldly success; university teachers and investigators may strike out upon new lines and yet escape destruction by the older dons. Universities compete against other universities at home and abroad and cannot altogether yield to the forces of dullness and subservience. They must maintain a certain difference from vulgar opinion and a certain repute of intellectual virility.

As we pass from the more organized to the less organized intellectual activities, we find conservative influence declining in importance, and a freer play for the creative drive. Freshness is a primary condition of journalistic, literary, and artistic success, and orthodoxy has nothing new to say or do. But the desire for freshness may be satisfied all too readily by merely extravagant, superficial, and incoherent inventions.

The influence of this old traditional nationalist social and political hierarchy which blocks the way to the new world is not, however, exerted exclusively through its control over schools and universities. Nor is that indeed its more

powerful activity. Would that it were There is also a direct, less defined contact of the old order with the nascent powers, that plays a far more effective part in delaying the development of the modern world commonweal. Necessarily the old order has determined the established way of life, which is, at its best, large, comfortable, amusing, respected. It possesses all the entrances and exits and all the controls of the established daily round. It is able to exact, and it does exact, almost without design, many conformities. There can be no very ample social life, therefore, for those who are conspicuously dissentient. Again the old order has a complete provision for the growth, welfare, and advancement of its children. It controls the founts of honour and self-respect; it provides a mapped-out world of behaviour. The new initiatives make their appearance here and there in the form of isolated individuals, here an inventor, there a bold organizer or a vigorous thinker. Apart from his specific work the innovating type finds that he must fall in with established things or his womenfolk will be ostracized, and he will be distressed by a sense of isolation even in the midst of successful activities. The more intensely he innovates in particular, the more likely is he to be too busy to seek out kindred souls and organize a new social life in general. The new things and ideas, even when they arise abundantly, arise scattered and unorganized, and the old order takes them in its net. America for example -- both on its Latin and on its English-speaking side—is in many ways a triumph of the old order over the new.

Men like Winwood Reade thought that the New World would be indeed a new world. They idealized its apparent emancipations. But as the more successful of the toiling farmers and traders of republican America rose one by one to affluence, leisure, and freedom, it was far more easy for them to adopt the polished and prepared social patterns and usages of Europe than to work out a new civilization in accordance with their equalitarian professions. Yet there remains a gap in their adapted "Society." Henry James, that acute observer of subtle social flavours, has pointed out the peculiar headlessness of social life in America because of the absence of court functions to "go on" to and justify the assembling and dressing. The social life has imitated the preparation for the Court without any political justification. In Europe the assimilation of the wealthy European industrialist and financier by the old order has been parallel and naturally more logically complete. He really has found a court to "go on" to. His social scheme was still undecapitated until kingdoms began to change into republics after 1917.

In this way the complex of classes vitally involved in the old militant nationalist order is mightily reinforced by much larger masses of imitative and annexed and more or less assimilated rich and active people. The great industrialist has married the daughter of the marquis and has a couple of

sons in the Guards and a daughter who is a princess. The money of the American Leeds, fleeing from the social futility of its land of origin, helped bolster up a mischievous monarchy in Greece. The functional and private lives of the new men are thus at war with one another. The real interests of the great industrialist or financier lie in cosmopolitan organization and the material development of the world commonweal, but his womenfolk pin flags all over him, and his sons are prepared to sacrifice themselves and all his business creations for the sake of trite splendours and Ruritanian romance.

But just so far as the great business organizer is capable and creative, so far is he likely to realize and resent the price in frustration that the old order obliges him to pay for amusement, social interest, and domestic peace and comfort. The Open Conspiracy threatens him with no effacement; it may even appear with an air of release. If he had women who were interested in his business affairs instead of women who had to be amused, and if he realized in time the practical, intellectual, and moral kidnap of sons and daughters by the old order that goes on, he might pass quite easily from acquiescence to antagonism. But in this respect he cannot be single-handed. This is a social and not an individual operation. The Open Conspiracy, it is clear, must include in its activities a great fight for the souls of economically-functional people. It must carve out a Society of its own from Society. Only by the creation of a new and better social life can it resist the many advantages and attractions of the old.

This constant gravitation back to traditional uses on the part of what might become new social types applies not merely to big people but to such small people as are really functional in the modern economic scheme. They have no social life adapted to their new economic relationships, and they are forced back upon the methods of behaviour established for what were roughly their analogues in the old order of things. The various sorts of managers and foremen in big modern concerns, for example, carry on ways of living they have taken ready-made from the stewards, tradesmen, tenantry, and upper servants of an aristocratic territorial system. They release themselves and are released almost in spite of themselves, slowly, generation by generation, from habits of social subservience that are no longer necessary nor convenient in the social process, acquire an official pride in themselves and take on new conceptions of responsible loyalty to a scheme. And they find themselves under suggestions of class aloofness and superiority to the general mass of less cardinal workers, that are often unjustifiable under new conditions. Machinery and scientific organization have been and still are revolutionizing productive activity by the progressive elimination of the unskilled worker, the hack, the mere toiler. But the social organization of the modern community and the mutual deportment of the associated workers left over after this elimination are still haunted by the tradition of

the lord, the middle-class tenant, and the servile hind. The development of self-respect and mutual respect among the mass of modern functional workers is clearly an intimate concern of the Open Conspiracy.

A vast amount of moral force has been wasted in the past hundred years by the antagonism of "Labour" to "Capital," as though this were the primary issue in human affairs. But this never was the primary issue, and it is steadily receding from its former importance. The ancient civilizations did actually rest upon a broad basis of slavery and serfdom. Human muscle was a main source of energy-ranking with sun, wind, and flood. But invention and discovery have so changed the conditions under which power is directed and utilized that muscle becomes economically secondary and inessential. We no longer want hewers of wood and drawers of water, carriers and pick and spade men. We no longer want that breeding swarm of hefty sweaty bodies without which the former civilizations could not have endured. We want watchful and understanding guardians and drivers of complex delicate machines, which can be mishandled and brutalized and spoilt all too easily. The less disposed these masters of our machines are to inordinate multiplication, the more room and food in the world for their ampler lives. Even to the lowest level of a fully-mechanicalized civilization it is required that the human element should be select. In the modern world, crowds are a survival, and they will presently be an anachronism, and crowd psychology therefore cannot supply the basis of a new order. It is just because labour is becoming more intelligent, responsible, and individually efficient that it is becoming more audible and impatient in social affairs.

It is just because it is no longer mere gang labour, and is becoming more and more intelligent co-operation in detail, that it now resents being treated as a serf, housed like a serf, fed like a serf, and herded like a serf, and its pride and thoughts and feelings disregarded. Labour is in revolt because as a matter of fact it is, in the ancient and exact sense of the word, ceasing to be labour at all.

The more progressive elements of the directive classes recognize this, but, as we have shown, there are formidable forces still tending to maintain the old social attitudes when arrogance became the ruler and the common man accepted his servile status. A continual resistance is offered by large sections of the prosperous and advantaged to the larger claims of the modernized worker, and in response the rising and differentiating workers develop an angry antagonism to these directive classes which allow themselves to be controlled by their conservative and reactionary elements. Moreover, the increasing relative intelligence of the labour masses, the unprecedented imaginative stimulation they experience, the continually more widespread realization of the available freedoms and comforts and indulgences that might be and are not shared by all in a modern state, develop a recalcitrance where once there was little but fatalistic

acquiescence. An objection to direction and obligation, always mutely present in the toiling multitude since the economic life of man began, becomes articulate and active. It is the taste of freedom that makes labour desire to be free. This series of frictions is a quite inevitable aspect of social reorganization, but it does not constitute a primary antagonism in the process.

The class war was invented by the classes; it is a natural tradition of the upper strata of the old order. It was so universally understood that there was no need to state it. It is implicit in nearly all the literature of the world before the nineteenth century—except the Bible, the Koran, and other sequelae. The "class war" of the Marxist is merely a poor snobbish imitation, a *tu quoque*, a pathetic, stupid, indignant reversal of and retort to the old arrogance, a pathetic upward arrogance.

These conflicts cut across rather than oppose or help the progressive development to which the Open Conspiracy devotes itself. Labour, awakened, enquiring, and indignant, is not necessarily progressive; if the ordinary undistinguished worker is no longer to be driven as a beast of burthen, he has --which also goes against the grain—to be educated to as high a level of co-operative efficiency as possible. He has to work better, even if he works for much shorter hours and under better conditions, and his work must be subordinated work still; he cannot become *en masse* sole owner and master of a scheme of things he did not make and is incapable of directing. Yet this is the ambition implicit in an exclusively "Labour" movement. Either the Labour revolutionary hopes to cadge the services of exceptional people without acknowledgment or return on sentimental grounds, or he really believes that anyone is as capable as anyone else—if not more so. The worker at a low level may be flattered by dreams of "class-conscious" mass dominion from which all sense of inferiority is banished, but they will remain dreams. The deep instinctive jealousy of the commonplace individual for outstanding quality and novel initiative may be organized and turned to sabotage and destruction, masquerading as and aspiring to be a new social order, but that will be a blind alley and not the road of progress. Our hope for the human future does not lie in crowd psychology and the indiscriminating rule of universal democracy.

The Open Conspiracy can have little use for mere resentments as a driving force towards its ends; it starts with a proposal not to exalt the labour class but to abolish it, its sustaining purpose is to throw drudges out of employment and eliminate the inept—and it is far more likely to incur suspicion and distrust in the lower ranks of the developing industrial order of to-day than to win support there. There, just as everywhere else in the changing social complexes of our time, it can appeal only to the exceptionally understanding individual who can without personal humiliation consider his present activities and relationships as provisional and who can, without taking offence, endure a searching criticising of his present quality and mode of living.

XII. — THE RESISTANCES OF THE LESS INDUSTRIALIZED PEOPLES TO THE DRIVE OF THE OPEN CONSPIRACY

So far, in our accounting of the powers, institutions, dispositions, types, and classes which will be naturally opposed to the Open Conspiracy, we have surveyed only such territory in the domain of the future world commonweal as is represented by the complex, progressive, highly-industrialized communities, based on a preceding landlord-soldier, tenant, town-merchant, and tradesman system, of the Atlantic type. These communities have developed farthest in the direction of mechanicalization, and they are so much more efficient and powerful that they now dominate the rest of the world. India, China, Russia, Africa present *mélanges* of social systems, thrown together, outpaced, overstrained, shattered, invaded, exploited, and more or less subjugated by the finance, machinery, and political aggressions of the Atlantic, Baltic, and Mediterranean civilization. In many ways they have an air of assimilating themselves to that civilization, evolving modern types and classes, and abandoning much of their distinctive traditions. But that they take from the West is mainly the new developments, the material achievements, rather than the social and political achievements, that, empowered by modern inventions, have won their to world predominance. They may imitate European nationalism to a certain extent; for them it becomes a convenient form of self-assertion against the pressure of a realized practical social and political inferiority; but the degree to which they will or can take over the social assumptions and habits of the long-established European-American hierarchy is probably very restricted. Their nationalism will remain largely indigenous; the social traditions in which they will try to make the new material forces subservient will be traditions of an Oriental life widely different from the original life of Europe. They will have their own resistances to the Open Conspiracy, therefore, but they will be different resistances from those we have hitherto considered. The automobile and the wireless set, the harvester and steel construction building, will come to the jungle rajah and the head hunter, the Brahmin and the Indian peasant, with a parallel and yet dissimilar message to the one they brought the British landowner or the corn and cattle farmers of the Argentine and the Middle West. Also they may be expected to evoke dissimilar reactions. To a number of the finer, more energetic minds of these overshadow communities which have lagged more or less ill the material advances to which this present ascendancy of western Europe and America is due, the Open Conspiracy may come with an effect of immense invitation. At one step they may go from the sinking vessel of their antiquated order, across their present conquerors, into a brotherhood of world rulers. They may turn to the problem of saving and adapting all that is rich and distinctive of their inheritance to the common ends of the race. But to the

less vigorous intelligences of this outer world, the new project of the Open Conspiracy will seem no better than a new form of Western envelopment and they will fight a mighty liberation as though it were a further enslavement to the European tradition. They will watch the Open Conspiracy for any signs of conscious superiority and racial disregard. Necessarily they will recognize it as a product of Western mentality and they may well be tempted to regard it as an elaboration and organization of current dispositions rather than the evolution of a new phase which will make no discrimination at last between the effete traditions of either East or West. Their suspicions will be sustained and developed by the clumsy and muddle-headed political and economic aggressions of the contemporary political and business systems, such as they are, of the West, now in progress. Behind that cloud of aggression Western thought has necessarily advanced upon them. It could have got to their attention in no other way.

Partly these resistances and criticisms of the decadent communities outside the Atlantic capitalist system will be aimed, not at the developing methods of the coming world community, but at the European traditions and restrictions that have imposed themselves upon these methods, and so far the clash of the East and West may be found to subserve the aims of the Open Conspiracy. In the conflict of old traditions and in the consequent deadlocks lies much hope for the direct acceptance of the groups of ideas centring upon the Open Conspiracy. One of the most interesting areas of humanity in this respect is the great system of communities under the sway or influence of Soviet Russia. Russia has never been completely incorporated with the European system; she became a just passable imitation of a western European monarchy in the seventeenth and eighteenth centuries, and talked at last of constitutions and parliaments—but the reality of that vast empire remained an Asiatic despotism, and the European mask was altogether smashed by the successive revolutions of 1917. The ensuing system is a government presiding over an enormous extent of peasants and herdsmen, by a disciplined association professing the faith and dogmas of Marx, as interpreted and qualified by Lenin and Stalin.

In many ways this government is a novelty of extraordinary interest. It labours against enormous difficulties within itself and without. Flung amazingly into a position of tremendous power, its intellectual flexibility is greatly restricted by the urgent militant necessity for mental unanimity and a consequent repression of criticism. It finds itself separated, intellectually and morally, by an enormous gap from the illiterate millions over which it rules. More open perhaps to scientific and creative conceptions than any other government, and certainly more willing to experiment and innovate, its enterprise is starved by the economic depletion of the country in the Great War and by the technical and industrial backwardness of the population

upon which it must draw for its personnel. Moreover, it struggles within itself between concepts of a modern scientific social organization and a vague anarchistic dream in which the "State" is to disappear, and an emancipated proletariat, breeding and expectorating freely, fills the vistas of time forevermore. The tradition of long years of hopeless opposition has tainted the world policy of the Marxist cult with a mischievous and irritating quality that focuses upon it the animosity of every government in the dominant Atlantic system. Marxism never had any but the vaguest fancies about the relation of one nation to another, and the new Russian government, for all its cosmopolitan phrases, is more and more plainly the heir to the obsessions of Tsarist Imperialism, using the Communist party, as other countries have used Christian missionaries, to maintain a propagandist government to forward its schemes. Nevertheless, the Soviet government has maintained itself for more than twelve years, and it seems far more likely to evolve than to persist. It is quite possible that it will evolve towards the conceptions of the Open Conspiracy, and in that case Russia may witness once again a conflict between new ideas and Old Believers. So far the Communist party in Moscow has maintained a considerable propaganda of ideas in the rest of the world and especially across its western frontier. Many of these ideas are now trite and stale. The time may be not far distant when the tide of propaganda will flow in the reverse direction. It has pleased the vanity of the Communist party to imagine itself conducting a propaganda of world revolution. Its fate may be to develop upon lines that will make its more intelligent elements easily assimilable to the Open Conspiracy for a world revolution. The Open Conspiracy as it spreads and grows may find a less encumbered field for trying out the economic developments implicit in its conceptions in Russia and Siberia than anywhere else in the world.

However severely the guiding themes and practical methods of the present Soviet government in Russia may be criticized, the fact remains that it has cleared out of its way many of the main obstructive elements that we find still vigorous in the more highly-organized communities in the West. It has liberated vast areas from the kindred superstitions of monarchy and the need for a private proprietary control of great economic interests. And it has presented both China and India with the exciting spectacle of a social and political system capable of throwing off many of the most characteristic features of triumphant Westernism, and yet holding its own. In the days when Japan faced up to modern necessities there were no models for imitation that were not communities of the Atlantic type pervaded by the methods of private capitalism, and in consequence the Japanese reconstituted their affairs on a distinctly European plan, adopting a Parliament and bringing their monarchy, social hierarchy, and business and

financial methods into a general conformity with that model. It is extremely doubtful whether any other Asiatic community will now set itself to a parallel imitation, and it will be thanks largely to the Russian revolution that this breakaway from Europeanization has occurred.

But it does not follow that such a breakaway will necessarily lead more directly to the Open Conspiracy. If we have to face a less highly organized system of interests and prejudices in Russia and China, we have to deal with a vastly wider ignorance and a vastly more formidable animalism. Russia is a land of tens of millions of peasants ruled over by a little band of the intelligentsia who can be counted only by tens of thousands. It is only these few score thousands who are accessible to ideas of world construction, and the only hope of bringing the Russian system into active participation in the world conspiracy is through that small minority and through its educational repercussion on the myriads below. As we go eastward from European Russia the proportion of soundly prepared intelligence to which we can appeal for understanding and participation diminishes to an even more dismaying fraction. Eliminate that fraction, and one is left face to face with inchoate barbarism incapable of social and political organization above the level of the war boss and the brigand leader. Russia itself is still by no means secure against a degenerative process in that direction, and the hope of China struggling out of it without some forcible directive interventions is a hope to which constructive liberalism clings with very little assurance.

We turn back therefore from Russia, China and the communities of Central Asia to the Atlantic world. It is in that world alone that sufficient range and amplitude of thought and discussion are possible for the adequate development of the Open Conspiracy. In these communities it must begin and for a long time its main activities will need to be sustained from these necessary centres of diffusion. It will develop amidst incessant mental Strife, and through that strife it will remain alive. It is no small part of the practical weakness of present-day communism that it attempts to centre its intellectual life and its directive activities in Moscow and so cuts itself off from the free and open discussions of the Western world. Marxism lost the world when it went to Moscow and took over the traditions of Tsarism as Christianity lost the world when it went to Rome and took over the traditions of Caesar. Entrenched in Moscow from searching criticism, the Marxist ideology may become more and more dogmatic and unprogressive, repeating its sacred credo and issuing its disregarded orders to the proletariat of the world, and so stay ineffectively crystallized until the rising tide of the Open Conspiracy submerges, dissolves it afresh, and incorporates whatever it finds assimilable.

India, like Japan, is cut off from the main body of Asiatic affairs. But while Japan has become a formally Westernized nationality in the comity of such

nations, India remains a world in itself. In that one peninsula nearly every type of community is to be found, from the tribe of jungle savages, through a great diversity of barbaric and mediaeval principalities, to the child and women—sweating factories and the vigorous modern commercialism of Bombay. Over it all the British imperialism prevails, a constraining and restraining influence, keeping the peace, checking epidemics, increasing the food supply by irrigation and the like, and making little or no effort to evoke responses to modern ideas. Britain in India is no propagandist of modern ferments: all those are left the other side of Suez. In India the Briton is a ruler as firm and self-assured and uncreative as the Roman. The old religious and social traditions, the complex customs, castes, tabus, and exclusions of a strangely-mixed but unamalgamated community, though a little discredited by this foreign predominance, still hold men's minds. They have been, so to speak, pickled in the preservative of the British raj.

The Open Conspiracy has to invade the Indian complex in conflict with the prejudices of both ruler and governed. It has to hope for individual breaches in the dull Romanism of the administration: here a genuine educationist, here a creative civil servant, here an official touched by the distant stir of the living homeland; and it has to try to bring these types into a co-operative relationship with a fine native scholar here or an active-minded prince or landowner or industrialist there. As the old methods of passenger transport are superseded by flying, it will be more and more difficult to keep the stir of the living homeland out of either the consciousness of the official hierarchy or the knowledge of the recalcitrant "native."

Very similar to Indian conditions is the state of affairs in the foreign possessions of France, the same administrative obstacles to the Open Conspiracy above, and below the same resentful subordination, cut off from the mental invigoration of responsibility. Within these areas of restraint, India and its lesser, simpler parallels in North Africa, Syria and the Far East, there goes on a rapid increase of low-grade population, undersized physically and mentally, and retarding the mechanical development of civilization by its standing offer of cheap labour to the unscrupulous entrepreneur, and possible feeble insurrectionary material to the unscrupulous political adventurer. It is impossible to estimate how slowly or how rapidly the knowledge and ideas that have checked the rate of increase of all the Atlantic populations may be diffused through these less alert communities.

We must complete our survey of the resistances against which the Open Conspiracy has to work by a few words about the Negro world and the regions of forest and jungle in which barbaric and even savage human life still escapes the infection of civilization. It seems inevitable that the development of modern means of communication and the conquest of

tropical diseases should end in giving access everywhere to modern administration and to economic methods, and everywhere the incorporation of the former wilderness in the modern economic process means the destruction of the material basis, the free hunting, the free access to the soil, of such barbaric and savage communities as still precariously survive. The dusky peoples, who were formerly the lords of these still imperfectly assimilate areas, are becoming exploited workers, slaves, serfs, hut-tax payers, labourers to a caste of white immigrants. The spirit of the plantation broods over all these lands. The Negro in America differs only from his subjugated brother in South Africa or Kenya Colony in the fact that he also, like his white master, is an immigrant. The situation in Africa and America adjusts itself therefore towards parallel conditions, the chief variation being in the relative proportions of the two races and the details of the methods by which black labour is made to serve white ends.

In these black and white communities which are establishing themselves in all those parts of the earth where once the black was native, or in which a sub-tropical climate is favourable to his existence at a low level of social development, there is—and there is bound to be for many years to come—much racial tension. The steady advance of birth-control may mitigate the biological factors of this tension later on, and a general amelioration of manners and conduct may efface that disposition to persecute dissimilar types, which man shares with many other gregarious animals. But meanwhile this tension increases and a vast multitude of lives is strained to tragic issues.

To exaggerate the dangers and evils of miscegenation is a weakness of our time. Man interbreeds with all his varieties and yet deludes himself that there are races of outstanding purity, the "Nordic," the "Semitic," and so forth. These are phantoms of the imagination. The reality is more intricate, less dramatic, and grips less easily upon the mind; the phantoms grip only too well and incite to terrible suppressions. Changes in the number of half-breeds and in the proportion of white and coloured are changes of a temporary nature that may become controllable and rectifiable in a few generations. But until this level of civilization is reached, until the colour of a man's skin or the kinks in a woman's hair cease to have the value of shibboleths that involve educational, professional, and social extinction or survival, a black and white community is bound to be continually preoccupied by a standing feud too intimate and persuasive to permit of any long views of the world's destiny.

We come to the conclusion therefore that it is from the more vigorous, varied, and less severely obsessed centres of the Atlantic civilizations in the temperate zone, with their abundant facilities for publication and discussion, their traditions of mental liberty and their immense variety of interacting free types, that the main beginnings of the Open Conspiracy must develop. For the rest of the world, its propaganda, finding but poor nourishment in the local conditions, may retain a missionary quality for many years.

XIII. — RESISTANCES AND ANTAGONISTIC FORCES IN OUR CONSCIOUS AND UNCONSCIOUS SELVES

WE have dealt in the preceding two chapters with great classes and assemblages of human beings as, in the mass, likely to be more or less antagonistic to the Open Conspiracy, and it has been difficult in those chapters to avoid the implication that "we," some sort of circle round the writer, were aloof from these obstructive and hostile multitudes, and ourselves entirely identified with the Open Conspiracy. But neither are these multitudes so definitely against, nor those who are with us so entirely for, the Open Conspiracy to establish a world community as the writer, in his desire for clearness and contrast and with an all too human disposition perhaps towards plain ego-centred combative issues, has been led to represent. There is no "we," and there can be no "we," in possession of the Open Conspiracy.

The Open Conspiracy is in partial possession of us, and we attempt to serve it. But the Open Conspiracy is a natural and necessary development of contemporary thought arising here, there, and everywhere. There are doubts and sympathies that weigh on the side of the Open Conspiracy in nearly everyone, and not one of us but retains many impulses, habits, and ideas in conflict with our general devotion, checking and limiting our service.

Let us therefore in this chapter cease to discuss classes and types and consider general mental tendencies and reactions which move through all humanity.

In our opening chapters we pointed out that religion is not universally distributed throughout human society. And of no one does it seem to have complete possession. It seizes upon some of us and exalts us for one hour now and then, for a day now and then; it may leave its afterglow upon our conduct for some time; it may establish restraints and habitual dispositions; sometimes it dominates us with but brief intermissions through long spells, and then we can be saints and martyrs. In all our religious phases there appears a desire to hold the phase, to subdue the rest of our life to the standards and exigencies of that phase. Our quickened intelligence sets itself to a general analysis of our conduct and to the problem of establishing controls over our unilluminated intervals.

And when the religious elements in the mind set themselves to such self-analysis, and attempt to order and unify the whole being upon this basis of the service and advancement of the race, they discover first a great series of indifferent moods, wherein the resistance to thought and word for the Open Conspiracy is merely passive and in the nature of inertia. There is a whole class of states of mind which may be brought together under the head of

"everydayism." The dinner bell and the playing fields, the cinema and the newspaper, the week-end visit and the factory siren, a host of such expectant things calls to a vast majority of people in our modern world to stop thinking and get busy with the interest in hand, and so on to the next, without a thought for the general frame and drama in which these momentary and personal incidents are set. We are driven along these marked and established routes and turned this way or that by the accidents of upbringing, of rivalries and loves, of chance encounters and vivid experiences, and it is rarely for many of us, and never for some, that the phases of broad reflection and self-questioning arise. For many people the religious life now, as in the past, has been a quite desperate effort to withdraw sufficient attention and energy from the flood of events to get some sort of grasp, and keep whatever grip is won, upon the relations of the self to the whole. Far more recoil in terror from such a possibility and would struggle strenuously against solitude in the desert, solitude under the stars, solitude in a silent room or indeed any occasion for comprehensive thought.

But the instinct and purpose of the religious type is to keep hold upon the comprehensive drama, and at the heart of all the great religions of the world we find a parallel disposition to escape in some manner from the aimless drive and compulsion of accident and everyday. Escape is attempted either by withdrawal from the presence of crowding circumstance into a mystical contemplation and austere retirement, or—what is more difficult and desperate and reasonable—by imposing the mighty standards of enduring issues upon the whole mass of transitory problems which constitute the actual business of life. We have already noted how the modern mind turns from retreat as a recognizable method of religion, and faces squarely up to the second alternative. The tumult of life has to be met and conquered. Aim must prevail over the aimless. Remaining in normal life we must yet keep our wills and thoughts aloof from normal life and fixed upon creative processes. However busied we may be, however challenged, we must yet save something of our best mental activity for self-examination and keep ourselves alert against the endless treacheries within that would trip us back into everydayism and disconnected responses to the stimuli of life.

Religions in the past, though they have been apt to give a preference to the renunciation of things mundane, have sought by a considerable variety of expedients to preserve the faith of those whom chance or duty still kept in normal contact with the world. It would provide material for an interesting study to enquire how its organizations to do this have worked in the past and how far they may be imitated and paralleled in the progressive life of the future. All the wide-reaching religions which came into existence in the five centuries before and the five centuries after Christ have made great use of periodic meetings for mutual reassurance, of sacred books, creeds,

fundamental heart-searchings, of confession, prayer, sacraments, seasons of withdrawal, meditation, fasting, and prayer. Do these methods mark a phase in the world's development, or are they still to be considered available?

This points to a very difficult tangle of psychological problems. The writer in his earlier draft of this book wrote that the modern religious individual leads, spiritually speaking, a life of extreme wasteful and dangerous isolation. He still feels that is true, but he realizes that the invention of corrective devices is not within his range. He cannot picture a secular Mass nor congregations singing hymns about the Open Conspiracy. Perhaps the modern soul in trouble will resort to the psychoanalysts instead of the confessional; in which case we need to pray for better psychoanalysts.

Can the modern mind work in societies? May the daily paper be slowly usurping the functions of morning prayer, a daily mental reminder of large things, with more vividness and, at present, lower standards? One of the most distressful facts of the spread of education in the nineteenth century was the unscrupulous exploitation of the new reading public by a group of trash-dealers who grew rich and mighty in the process. Is the popular publisher and newspaper proprietor always to remain a trash-dealer? Or are we to see, in the future, publications taking at times some or all of the influence of revivalist movements, and particular newspapers rising to the task of sustaining a common faith in a gathering section of the public?

The modern temple in which we shall go to meditate may be a museum; the modern religious house and its religious life may be a research organization. The Open Conspirator must see to it that the museums show their meaning plain. There may be not only literature presently, but even plays, shows, and music, to subserve new ideas instead of trading upon tradition.

It is plain that to read and be moved by great ideas and to form good resolutions with no subsequent reminders and moral stocktaking is not enough to keep people in the way of the Open Conspiracy. The relapse to everydayism is too easy. The contemporary Open Conspirator may forget, and he has nothing to remind him; he may relapse, and he will hear no reproach to warn him of his relapse. Nowhere has he recorded vow. "Everyday" has endless ways of justifying the return of the believer to sceptical casualness. It is easy to persuade oneself that one is taking life or oneself "too seriously." The mind is very self-protective; has a disposition to abandon too great or too far-reaching an effort and return to things indisputably within its scope. We have an instinctive preference for thinking things are "all right"; we economize anxiety; defend the delusions that we can work with, even though we half realize they are no more than delusions. We resent the warning voice, the critical question that robs our activities of

assurance. Our everyday moods not only the antagonists of our religious moods, but they resent all outward appeals to our religious moods, and they welcome every help against religious appeals. We pass very readily from the merely defensive to the defensive aggressive, and from refusing to hear the word that might stir our consciences to a vigorous effort to suppress its utterance.

Churches, religious organizations, try to keep the revivifying phase and usage where it may strike upon the waning or slumbering faith of the convert, but modern religion as yet has no such organized rebinders. {sic-RW} They cannot be improvised. Crude attempts to supply the needed corrective of conduct may do less good than harm. Each one of us for himself must do what he can to keep his high resolve in mind and protect himself from the snare of his own moods of fatigue or inadvertency.

But these passive and active defences of current things which operate in and through ourselves, and find such ready sympathy and assistance in the world about us, these massive resistance systems, are only the beginning of our tale of the forces antagonistic to the Open Conspiracy that lurk in our complexities.

Men are creatures with other faults quite beyond and outside our common disposition to be stupid, indolent, habitual, and defensive. Not only have we active creative impulses, but also acutely destructive ones. Man is a jealous animal. In youth and adolescence egotism is extravagant. It is natural for it to be extravagant, then, and there is no help for it. A great number of us at that stage would rather not see a beautiful or wonderful thing come into existence than have it come into existence disregarding us. Something of that jealous malice, that self-assertive ruthlessness, remains in all of us throughout life. At his worst man can be an exceedingly combative, malignant, mischievous and cruel animal. None of us are altogether above the possibility of such phases. When we consider the oppositions to the Open Conspiracy that operate in the normal personality, we appreciate the soundness of the catechism which instructs us to renounce not only the trivial world and the heavy flesh, but the active and militant devil.

To make is a long and wearisome business, with many arrests and disappointments, but to break gives an instant thrill. We all know something of the delight of the Bang. It is well for the Open Conspirator to ask himself at times how far he is in love with the dream of a world in order, and how far he is driven by hatred of institutions that bore or humiliate him. He may be no more than a revengeful incendiary in the mask of a constructive worker. How safe is he, then, from the reaction to some fresh humiliation? The Open Conspiracy which is now his refuge and vindication may presently fail to give him the compensation he has sought, may offer him no better than a minor rôle, may display Irritating and incomprehensible preferences. And for a great number of things in overt antagonism to the great aim of the Open

Conspiracy, he will still find within himself not simply acquiescence but sympathy and a genuine if inconsistent admiration. There they are, waiting for his phase of disappointment. Back he may go to the old loves with a new animus against the greater scheme. He may be glad to be quit of prigs and humbugs, and back among the good fellowship of nothing in particular.

Man has pranced a soldier in reality and fancy for so many generations that few of us can altogether release our imaginations from the brilliant pretensions of flags, empire, patriotism, and aggression. Business men, especially in America, seem to feel a sort of glory in calling even the underselling and overadvertising of rival enterprises "fighting." Pill vendors and public departments can have their "wars," their heroisms, their desperate mischiefs, and so get that Napoleonic feeling. The world and our reveries are full of the sentimentalities, the false glories and loyalties of the old combative traditions, trailing after them, as they do, so much worth and virtue in a dulled and stupefied condition. It is difficult to resist the fine gravity, the high self-respect, the examples of honour and good style in small things, that the military and naval services can present to us, for all that they are now no more than noxious parasites upon the nascent world commonweal. In France not a word may be said against the army; in England, against the navy. There will be many Open Conspirators at first who will scarcely dare to say that word even to themselves.

But all these obsolete values and attitudes with which our minds are cumbered must be cleared out if the new faith is to have free play. We have to clear them out not only from our own minds but from the minds of others who are to become our associates. The finer and more picturesque these obsolescent loyalties, obsolescent standards of honour, obsolescent religious associations, may seem to us, the more thoroughly must we seek to release our minds and the minds of those about us from them and cut off all thought of a return.

We cannot compromise with these vestiges of the ancient order and be faithful servants of the new. Whatever we retain of them will come back to life and grow again. It is no good to operate for cancer unless the whole growth is removed. Leave a crown about and presently you will find it being worn by someone resolved to be a king. Keep the name and image of a god without a distinct museum label and sooner or later you will discover a worshipper on his knees to it and be lucky not to find a human sacrifice upon the altar. Wave a flag and it will wrap about you. Of yourself even more than of the community is this true; these can be no half measures. You have not yet completed your escape to the Open Conspiracy from the cities of the plain while it is still possible for you to take a single backward glance.

XIV. — THE OPEN CONSPIRACY BEGINS AS A MOVEMENT OF DISCUSSION, EXPLANATION, AND PROPAGANDA

A NEW and happier world, a world community, is awakening, within the body of the old order, to the possibility of its emergence. Our phrase, "the Open Conspiracy" is merely a name for that awakening. To begin with, the Open Conspiracy is necessarily a group of ideas.

It is a system of modern ideas which has been growing together in the last quarter of the century, and particularly since the war. It is the reaction of a rapidly progressing biological conception of life and of enlarged historical realizations upon the needs and urgencies of the times. In this book we are attempting to define this system and to give it this provisional name. Essentially at first it is a dissemination of this new ideology that must occur. The statement must be tried over and spread before a widening circle of people.

Since the idea of the Open Conspiracy rests upon and arises out of a synthesis of historical, biological, and sociological realizations, we may look for these realizations already in the case of people with sound knowledge in these fields; such people will be prepared for acquiescence without any explanatory work; there is nothing to set out to them beyond the suggestion that it is time they became actively conscious of where they stand. They constitute already the Open Conspiracy in an unorganized solution, and they will not so much adhere as admit to themselves and others their state of mind. They will say, "We knew all that." Directly we pass beyond that comparatively restricted world, however, we find that we have to deal with partial knowledge, with distorted views, or with blank ignorance, and that a revision and extension of historical and biological ideas and a Considerable elucidation of economic misconceptions have to be undertaken. Such people have to be brought up to date with their information.

I have told already how I have schemed out a group of writings to embody the necessary ideas of the new time in a form adapted to the current reading public; I have made a sort of provisional "Bible," so to speak, for some factors at least in the Open Conspiracy. It is an early sketch. As the current reading public changes, all this work will become obsolescent so far as its present form and method go. But not so far as its substantial method goes. That I believe will remain.

Ultimately this developing mass of biological, historical, and economic information and suggestion must be incorporated in general education if the Open Conspiracy is to come to its own. At present this propaganda has to go on among adolescents and adults because of the backwardness and political conservatism of existing educational organizations. Most real modern

education now is done in spite of the schools and to correct the misconceptions established by the schools. But what will begin as adult propaganda must pass into a kultur-kampf to win our educational machinery from reaction and the conservation of outworn ideas and attitudes to the cause of world reconstruction. The Open Conspiracy itself can never be imprisoned and fixed in the form of an organization, but everywhere Open Conspirators should be organizing themselves for educational reform.

And also within the influence of this comprehensive project there will be all sorts of groupings for study and progressive activity. One can presuppose the formation of groups of friends, of family groups, of students and employees or other sorts of people, meeting and conversing frequently in the course of their normal occupations, who will exchange views and find themselves in agreement upon this idea of a constructive change of the world as the guiding form of human activities.

Fundamentally important issues upon which unanimity must be achieved from the outset are:

Firstly, the entirely provisional nature of all existing governments, and the entirely provisional nature, therefore, of all loyalties associated therewith;

Secondly, the supreme importance of population control in human biology and the possibility it affords us of a release from the pressure of the struggle for existence on ourselves; and

Thirdly, the urgent necessity of protective resistance against the present traditional drift towards war.

People who do not grasp the vital significance of these test issues do not really begin to understand the Open Conspiracy. Groups coming into agreement upon these matters, and upon their general interpretation of history, will be in a position to seek adherents, enlarge themselves, and attempt to establish communication and co-operation with kindred groups for common ends. They can take up a variety of activities to develop a sense and habit of combined action and feel their way to greater enterprises.

We have seen already that the Open Conspiracy must be heterogeneous in origin. Its initial groupings and associations will be of no uniform pattern. They will be of a very different size, average age, social experience, and influence. Their particular activities will be determined by the things. Their diverse qualities and influences will express themselves by diverse attempts at organization, each effective in its own sphere. A group or movement of students may find itself capable of little more than self-education and personal propaganda; a handful of middle-class people in small town may find its small resources fully engaged at first in such things as, for example,

seeing that desirable literature is available for sale or in local public library, protecting books and news vendors from suppression, or influencing local teachers. Most parents of school children can press for the teaching of universal history and sound biology and protest against the inculcation of aggressive patriotism. There is much scope for the single individual in this direction. On the other hand, a group of ampler experience and resources may undertake the printing, publication, and distribution of literature, and exercise considerable influence upon public opinion in turning education in the right direction. The League of Nations movement, the Birth Control movement, and most radical and socialist societies, are fields into which Open Conspirators may go to find adherents more than half prepared for their wider outlook. The Open Conspiracy is a fuller and ampler movement into which these incomplete activities must necessarily merge as its idea takes possession of men's imaginations.

From the outset, the Open Conspiracy will set its face against militarism. There is a plain present need for the organization now, before war comes again, of an open and explicit refusal to serve in any war—or at most to serve in war, directly or indirectly, only after the issue has been fully and fairly submitted to arbitration. The time for a conscientious objection to war service is manifestly before and not after the onset of war. People who have by their silence acquiesced in a belligerent foreign policy right up to the onset of war, have little to complain of if they are then compelled to serve. And a refusal to participate with one's country in warfare is a preposterously incomplete gesture unless it is rounded off by the deliberate advocacy of a world pax, a world economic control, and a restrained population, such as the idea of the Open Conspiracy embodies.

The putting upon record of its members' reservation of themselves from any or all of the military obligations that may be thrust upon the country by military and diplomatic effort, might very conceivably be the first considerable overt act of many Open Conspiracy groups. It would supply the practical incentive to bring many of them together in the first place. It would necessitate the creation of regional or national ad hoc committees for the establishment of a collective legal and political defensive for this dissent from current militant nationalism. It would bring the Open Conspiracy very early out of the province of discussion into the field of practical conflict. It would from the outset invest it with a very necessary quality of present applicability.

The anticipatory repudiation of military service, so far as this last may be imposed by existing governments in their factitious international rivalries, need not necessarily involve a denial of the need of military action on behalf of the world commonweal for the suppression of nationalist brigandage, nor need it prevent the military training of Open Conspirators. It is simply the

practical form of assertion that the normal militant diplomacy and warfare of the present time are offences against civilization, processes in the nature of brigandage, sedition, and civil war, and that serious men cannot be expected to play anything but a rôle of disapproval, non-participation, or active prevention towards them. Our loyalty to our current government, we would intimate, is subject to its sane and adult behaviour.

These educational and propagandist groups drawing together into an organized resistance to militarism and to the excessive control of individuals by the makeshift governments of to-day, constitute at most only the earliest and more elementary grade of the Open Conspiracy, and we will presently go on to consider the more specialized and constructive forms its effort must evoke. Before doing so, however, we may say a little more about the structure and method of these possible initiatory groupings.

Since they are bound to be different and miscellaneous in form, size, quality, and ability, any early attempts to organize them into common general action or even into regular common gatherings are to be deprecated. There should be many types of groups. Collective action had better for a time - perhaps for a long time—be undertaken not through the merging of groups but through the formation of ad hoc associations for definitely specialized ends, all making for the new world civilization. Open Conspirators will come into these associations to make a contribution very much as people come into limited liability companies, that is to say with a subscription and not with their whole capital. A comprehensive organization attempting from the first to cover all activities would necessarily rest upon and promote one prevalent pattern of activity and hamper or estrange the more original and interesting forms. It would develop a premature orthodoxy, it would cease almost at once to be creative, and it would begin to form a crust of tradition. It would become ankylosed. With the dreadful examples of Christianity and Communism before us, we must insist that the idea of the Open Conspiracy ever becoming a single organization must be dismissed from the mind. It is a movement, yes, a system of purposes, but its end is a free and living, if unified, world.

At the utmost seven broad principles may be stated as defining the Open Conspiracy and holding it together. And it is possible even of these, one, the seventh, may be, if not too restrictive, at least unnecessary. To the writer it seems unavoidable because it is so intimately associated with that continual dying out of tradition upon which our hopes for an unencumbered and expanding human future rest.

(1) The complete assertion, practical as well as theoretical, of the provisional nature of existing governments and of our acquiescence in them;

- (2) The resolve to minimize by all available means the conflicts of these governments, their militant use of individuals and property, and their interferences with the establishment of a world economic system;
- (3) The determination to replace private, local or national ownership of at least credit, transport, and staple production by a responsible world directorate serving the common ends of the race;
- (4) The practical recognition of the necessity for world biological controls, for example, of population and disease;
- (5) The support of a minimum standard of individual freedom and welfare in the world; and
- (6) The supreme duty of subordinating the personal career to the creation of a world directorate capable of these tasks and to the general advancement of human knowledge, capacity, and power;
- (7) The admission therewith that our immortality is conditional and lies in the race and not in our individual selves.

XV. — EARLY CONSTRUCTIVE WORK OF THE OPEN CONSPIRACY

IN such terms we may sketch the practicable and possible opening phase of the Open Conspiracy.

We do not present it as a movement initiated by any individual or radiating from any particular centre. In this book we are not starting something; we are describing and participating in something which has started. It arises naturally and necessarily from the present increase of knowledge and the broadening outlook of many minds throughout the world, and gradually it becomes conscious of itself. It is reasonable therefore to anticipate its appearance all over the world in sporadic mutually independent groupings and movements, and to recognize not only that they will be extremely various, but that many of them will trail with them racial and regional habits and characteristics which will only be shaken off as its cosmopolitan character becomes imperatively evident.

The passage from the partial anticipations of the Open Conspiracy that already abound everywhere to its complete and completely self-conscious statement may be made by almost imperceptible degrees. To-day it may seem no more than a visionary idea; to-morrow it may be realized as a world-wide force of opinion and will. People will pass with no great inconsistency from saying that the Open Conspiracy is impossible to saying that it has always been plain and clear to them, that to this fashion they have shaped their lives as long as they can remember.

In its opening phase, in the day of small things, quite minor accidents may help or delay the clear definition and popularization of its main ideas. The changing pattern of public events may disperse or concentrate attention upon it, or it may win the early adherence of men of exceptional resources, energy, or ability. It is impossible to foretell the speed of its advance. Its development may be slower or faster, direct or devious, but the logic of accumulating realizations thrusts it forward, will persist in thrusting it on, and sooner or later it will be discovered, conscious and potent, the working religion of most sane and energetic people.

Meanwhile our supreme virtues must be faith and persistence.

So far we have considered only two of the main activities of the Open Conspiracy, the one being its propaganda of confidence in the possible world commonweal, and the other its immediate practical attempt to systematize resistance to militant and competitive imperialism and nationalism. But such things are merely its groundwork undertakings; they do no more than clear the site and make the atmosphere possible for its organized constructive efforts.

Directly we turn to that, we turn to questions of special knowledge, special effort, and special organization.

Let us consider first the general advancement of science, the protection and support of scientific research, and the diffusion of scientific knowledge. These things fall within the normal scheme of duty for the members of the Open Conspiracy. The world of science and experiment is the region of origin of nearly all the great initiatives that characterize our times; the Open Conspiracy owes its inspiration, its existence, its form and direction entirely to the changes of condition these initiatives have brought about, and yet a large number of scientific workers live outside the sphere of sympathy in which we may expect the Open Conspiracy to materialize, and collectively their political and social influence upon the community is extraordinarily small. Having regard to the immensity of its contributions and the incalculable value of its promise to the modern community, science—research, that is, and the diffusion of scientific knowledge—is extraordinarily neglected, starved, and threatened by hostile interference. This is largely because scientific work has no strong unifying organization and cannot in itself develop such an organization.

Science is a hard mistress, and the first condition of successful scientific work is that the scientific man should stick to his research. The world of science is therefore in itself, at its core, a miscellany of specialists, often very ungracious specialists, and, rather than offer him help and co-operation, it calls for understanding, tolerance, and service from the man of general intelligence and wider purpose. The company of scientific men is less like a host of guiding angels than like a swarm of marvellous bees --endowed with stings—which must be hived and cherished and multiplied by the Open Conspiracy.

But so soon as we have the Open Conspiracy at work, putting its plainly and offering its developing ideas and activities to those most preciously preoccupied men, then reasonably, when it involves no special trouble for them, when it is the line of least resistance for them, they may be expected to fall in with its convenient and helpful aims and find in it what they have hitherto lacked, a common system of political and social concepts to hold them together.

When that stage is reached, we shall be saved such spectacles of intellectual prostitution as the last Great War offered, when men of science were herded blinking from their laboratories to curse one another upon nationalist lines, and when after the war stupid and wicked barriers were set up to the free communication of knowledge by the exclusion of scientific men of this or that nationality from international scientific gatherings. The Open Conspiracy must help the man of science to realize, what at present he fails

most astonishingly to realize, that he belongs to a greater comity than any king or president represents to-day, and so prepare him for better behaviour in the next season of trial.

The formation of groups in, and not only in, but about and in relation to, the scientific world, which will add to those first main activities of the Open Conspiracy, propaganda and pacificism, a special attention to the needs of scientific work, may be enlarged upon with advantage here, because it will illustrate quite typically the idea of a special work carried on in relation to a general activity, which is the subject of this section.

The Open Conspiracy extends its invitation to all sorts and conditions of men, but the service of scientific progress is for those only who are specially equipped or who are sufficiently interested to equip themselves. For scientific work there is first of all a great need of endowment and the setting up of laboratories, observatories, experimental stations, and the like, in all parts of the world. Numbers of men and women capable of scientific work never achieve it for want of the stimulus of opportunity afforded by endowment. Few contrive to create their own opportunities. The essential man of science is very rarely an able collector or administrator of money, and anyhow, the detailed work of organization is a grave call upon his special mental energy. But many men capable of a broad and intelligent appreciation of scientific work, but not capable of the peculiar intensities of research, have the gift of extracting money from private and public sources, and it is for them to use that gift modestly and generously in providing the framework for those more especially endowed.

And there is already a steadily increasing need for the proper storage and indexing of scientific results, and every fresh worker enhances it. Quite a considerable amount of scientific work goes fruitless or is needlessly repeated because of the growing volume of publication, and men make discoveries in the field of reality only to lose them again in the lumber room of record. Here is a second line of activity to which the Open Conspirator with a scientific bias may direct his attention.

A third line is the liaison work between the man of science and the common intelligent man; the promotion of publications which will either state the substance, implications and consequences of new work in the vulgar tongue, or, if that is impossible, train the general run of people to the new idioms and technicalities which need to be incorporated with the vulgar tongue if it is still to serve its ends as a means of intellectual intercourse.

Through special ad hoc organizations, societies for the promotion of Research, for Research Defence, for World Indexing, for the translation of Scientific Papers, for the Diffusion of New Knowledge, the surplus energies of a great number of Open Conspirators can be directed to entirely creative

ends and a new world system of scientific work built up, within which such dear old institutions as the Royal Society of London, the various European Academies of Science and the like, now overgrown and inadequate, can maintain their venerable pride in themselves, their mellowing prestige, and their distinguished exclusiveness, without their present privilege of inflicting cramping slights and restrictions upon the more abundant scientific activities of to-day.

So in relation to science—and here the word is being used in its narrower accepted meaning for what is often spoken of as pure science, the search for physical and biological realities, uncomplicated by moral, social, and "practical" considerations—we evoke a conception of the Open Conspiracy as producing groups of socially associated individuals, who engage primarily in the general basic activities of the Conspiracy and adhere to and promote the seven broad principles summarized at the end of Chapter Fourteen, but who work also with the larger part of their energies, through international and cosmopolitan societies and in a multitude of special ways, for the establishment of an enduring and progressive world organization of pure research. They will have come to this special work because their distinctive gifts, their inclinations, their positions and opportunities have indicated it as theirs.

Now a very parallel system of Open Conspiracy groups is conceivable, in relation to business and industrial life. It would necessarily be a vastly bulkier and more heterogeneous system of groups, but otherwise the analogy is complete. Here we imagine those people whose gifts, inclinations, positions and opportunities as directors, workers, or associates give them an exceptional insight into and influence in the processes of producing and distributing commodities, can also be drawn together into groups within the Open Conspiracy. But these groups will be concerned with the huge and more complicated problems of the processes by which even now the small isolated individual adventures in production and trading that constituted the economic life of former civilizations, are giving place to larger, better instructed, better planned industrial organizations, whose operations and combinations become at last world wide.

The amalgamations and combinations, the substitution of large-scale business for multitudes of small-scale businesses, which are going on now, go on with all the cruelty and disregards of a natural process. If a man is to profit and survive, these unconscious blunderings—which now stagger towards but which may never attain world organization—much be watched, controlled, mastered, and directed. As uncertainty diminishes, the quality of adventure and the amount of waste diminish also, and large speculative profits are no longer possible or justifiable. The transition from speculative adventure to organized foresight in the common interest, in the whole world

of economic life, is the substantial task of the Open Conspiracy. And it is these specially interested and equipped groups, and not the movement as a whole, which may best begin the attack upon these fundamental readjustments.

The various Socialist movements of the nineteenth and earlier twentieth centuries had this in common, that they sought to replace the "private owner" in most or all economic interests by some vaguely apprehended "public owner." This, following the democratic disposition of the times, was commonly conceived of as an elected body, a municipality, the parliamentary state or what not. There were municipal socialists, "nationalizing" socialists, imperial socialists. In the mystic teachings of the Marxist, the collective owner was to be "the dictatorship of the proletariat." Production for profit was denounced. The contemporary mind realizes the evils of production for profit and of the indiscriminate scrambling of private ownership more fully than ever before, but it has a completer realization and a certain accumulation of experience in the difficulties of organizing that larger ownership we desire. Private ownership may not be altogether evil as a provisional stage, even if it has no more in its favour than the ability to transcend political boundaries.

Moreover—and here again the democratic prepossessions of the nineteenth century come in—the Socialist movements sought to make every single adherent a reformer and a propagandist of economic methods. In order to do so, it was necessary to simplify economic processes to the crudity of nursery toys, and the intricate interplay of will and desire in enterprise, normal employment, and direction, in questions of ownership, wages, credit, and money, was reduced to a childish fable of surplus value wickedly appropriated. The Open Conspiracy is not so much a socialism as a more comprehensive offspring which has eaten and assimilated whatever was digestible of its socialist forbears. It turns to biology for guidance towards the regulation of quantity and a controlled distribution of the human population of the world, and it judges all the subsidiary aspects of property and pay by the criterion of most efficient production and distribution in relation to the indications thus obtained.

These economic groups, then, of the Open Conspiracy, which may come indeed to be a large part of the Open Conspiracy, will be working in that vast task of economic reconstruction—which from the point of view of the older socialism was the sole task before mankind. They will be conducting experiments and observing processes according to their opportunities. Through ad hoc societies and journals they will be comparing and examining their methods and preparing reports and clear information for the movement at large. The whole question of money and monetary methods in our modern communities, so extraordinarily disregarded in socialist

literature, will be examined under the assumption that money is the token of the community's obligation, direct or indirect, to an individual, and credit its permission to deal freely with material.

The whole psychology of industry and industrial relationship needs to be revised and restated in terms of the collective efficiency and welfare of mankind. And just as far as can be contrived, the counsel and the confidences of those who now direct great industrial and financial operations will be invoked. The first special task of a banker, or a bank clerk for that matter, who joins the Open Conspiracy, will be to answer the questions: "What is a bank?" "What are you going to do about it?" "What have we to do about it?" The first questions to a manufacturer will be: "What are you making and why?" and "What are you and we to do about it?" Instead of the crude proposals to "expropriate" and "take over by the State" of the primitive socialism, the Open Conspiracy will build up an encyclopædic conception of the modern economic complex as a labyrinthine pseudo-system progressively eliminating waste and working its way along multitudinous channels towards unity, towards clarity of purpose and method, towards abundant productivity and efficient social service.

Let us come back now for a paragraph or so to the ordinary adherent to the Open Conspiracy, the adherent considered not in relation to his special aptitudes and services, but in relation to the movement as a whole and to those special constructive organizations outside his own field. It will be his duty to keep his mind in touch with the progressing concepts of the scientific work so far as he is able and with the larger issues of the economic reconstruction that is afoot, to take his cues from the special groups and organizations engaged upon that work, and to help where he finds his opportunity and when there is a call upon him. But no adherent of the Open Conspiracy can remain merely and completely an ordinary adherent. There can be no pawns in the game of the Open Conspiracy, no "cannon fodder" in its war. A special activity, quite as much as a general understanding, is demanded from everyone who looks creatively towards the future of mankind.

We have instanced first the fine and distinctive world organization of pure science, and then the huge massive movement towards co-operating unity of aim in the economic life, until at last the production and distribution of staple necessities is apprehended as one world business, and we have suggested that this latter movement may gradually pervade and incorporate a very great bulk of human activities. But besides this fine current and this great torrent of evolving activities and relationships there are also a very considerable variety of other great functions in the community towards which Open Conspiracy groups must direct their organizing enquiries and

suggestions in their common intention of ultimately assimilating all the confused processes of to-day into a world community.

For example, there must be a series of groups in close touch at one end with biological science and at the other with the complex of economic activity, who will be concerned specially with the practical administration of the biological interests of the race, from food plants and industrial products to pestilences and population. And another series of groups will gather together attention and energy to focus them upon the educational process. We have already pointed out that there is a strong disposition towards conservatism in normal educational institutions. They preserve traditions rather than develop them. They are likely to set up a considerable resistance to the reconstruction of the world outlook upon the threefold basis defined in Chapter Fourteen. This resistance must be attacked by special societies, by the establishment of competing schools, by help and promotion for enlightened teachers, and, wherever the attack is incompletely successful, it must be supplemented by the energetic diffusion of educational literature for adults, upon modern lines. The forces of the entire movement may be mobilized in a variety of ways to bring pressure upon reactionary schools and institutions.

A set of activities correlated with most of the directly creative ones will lie through existing political and administrative bodies. The political work of the Open Conspiracy must be conducted upon two levels and by entirely different methods. Its main political idea, its political strategy, is to weaken, efface, incorporate, or supersede existing governments. But there is also a tactical diversion of administrative powers and resources to economic and educational arrangements of a modern type. Because a country or a district is inconvenient as a division and destined to ultimate absorption in some more comprehensive and economical system of government, that is no reason why its administration should not be brought meanwhile into working co-operation with the development of the Open Conspiracy. Free Trade nationalism in power is better than high tariff nationalism, and pacifist party liberalism better than aggressive party patriotism.

This evokes the anticipation of another series of groups, a group in every possible political division, whose task it will be to organize the whole strength of the Open Conspiracy in that division as an effective voting or agitating force. In many divisions this might soon become a sufficiently considerable block to affect the attitudes and pledges of the national politicians. The organization of these political groups into provincial or national conferences and systems would follow hard upon their appearance. In their programmes they would be guided by meetings and discussions with the specifically economic, educational, biological, scientific and cultural groups, but they would also form their own special research bodies to work

out the incessant problems of transition between the old type of locally centred administrations and a developing world system of political controls.

In the preceding chapter we sketched the first practicable first phase of the Open Conspiracy as the propaganda of a group of interlocking ideas, a propaganda associated with pacifist action. In the present chapter we have given a scheme of branching and amplifying development. In this scheme, this scheme of the second phase, we conceive of the Open Conspiracy as consisting of a great multitude and variety of overlapping groups, but now all organized for collective political, social, and educational as well as propagandist action. They will recognize each other much more clearly than they did at first, and they will have acquired a common name.

The groups, however, almost all of them, will still have specific work also. Some will be organizing a sounder setting for scientific progress, some exploring new social and educational possibilities, many concentrated upon this or that phase in the reorganization of the world's economic life, and so forth. The individual Open Conspirator may belong to one or more groups and in addition to the ad hoc societies and organizations which the movement will sustain, often in co-operation with partially sympathetic people still outside its ranks.

The character of the Open Conspiracy will now be plainly displayed. It will have become a great world movement as wide-spread and evident as socialism or communism. It will have taken the place of these movements very largely. It will be more than they were, it will be frankly a world religion. This large, loose assimilatory mass of movements, groups, and societies will be definitely and obviously attempting to swallow up the entire population of the world and become the new human community.

XVI. — EXISTING AND DEVELOPING MOVEMENTS WHICH ARE CONTRIBUTORY TO THE OPEN CONSPIRACY AND WHICH MUST DEVELOP

A COMMON CONSCIOUSNESS. THE PARABLE OF PROVIDER ISLAND

A SUGGESTION has already been made in an earlier chapter of this essay which may perhaps be expanded here a little more. It is that there already exist in the world a considerable number of movements in industry, in political life, in social matters, in education, which point in the same direction as the Open Conspiracy and are inspired by the same spirit. It will be interesting to discuss how far some of these movements may not become confluent with others and by a mere process of logical completion identify themselves consciously with the Open Conspiracy in its entirety.

Consider, for example, the movement for a scientific study and control of population pressure, known popularly as the Birth Control movement. By itself, assuming existing political and economic conditions, this movement lays itself open to the charge of being no better than a scheme of "race suicide." If a population in some area of high civilization attempts to restrict increase, organize its economic life upon methods of maximum individual productivity, and impose order and beauty upon its entire territory, that region will become irresistibly attractive to any adjacent festering mass of low-grade, highly reproductive population. The cheap humanity of the one community will make a constant attack upon the other, affording facile servility, prostitutes, toilers, hand labour. Tariffs against sweated products, restriction of immigration, tensions leading at last to a war of defensive massacre are inevitable. The conquest of an illiterate, hungry, and incontinent multitude may be almost as disastrous as defeat for the selecter race. Indeed, one finds that in discussion the propagandists of Birth Control admit that their project must be universal or dysgenic. But yet quite a number of them do not follow up these admissions to their logical consequences, produce the lines and continue the curves until the complete form of the Open Conspiracy appears. It will be the business of the early Open Conspiracy propagandists to make them do so, and to install groups and representatives at every possible point of vantage in this movement.

And similarly the now very numerous associations for world peace halt in alarm on the edge of their own implications. World Peace remains a vast aspiration until there is some substitute for the present competition of states for markets and raw material, and some restraint upon population pressure. League of Nations Societies and all forms of pacifist organization are either futile or insincere until they come into line with the complementary propositions of the Open Conspiracy.

The various Socialist movements again are partial projects professing at present to be self-sufficient schemes. Most of them involve a pretence that national and political forces are intangible phantoms, and that the primary issue of population pressure can be ignored. They produce one woolly scheme after another for transferring the property in this, that, or the other economic plant and interest from bodies of shareholders and company promoters to gangs of politicians or syndicates of workers—to be steered to efficiency, it would seem, by pillars of cloud by day and pillars of fire by night. The communist party has trained a whole generation of disciples to believe that the overthrow of a vaguely apprehended "Capitalism" is the simple solution of all human difficulties. No movement ever succeeded so completely in substituting phrases for thought. In Moscow communism has trampled "Capitalism" underfoot for ten eventful years, and still finds all the problems of social and political construction before it.

But as soon as the Socialist or Communist can be got to realize that his repudiation of private monopolization is not a complete programme but just a preliminary principle, he is ripe for the ampler concepts of the modern outlook. The Open Conspiracy is the natural inheritor of socialist and communist enthusiasms; it may be in control of Moscow before it is in control of New York.

The Open Conspiracy may achieve the more or less complete amalgamation of all the radical impulses in the Atlantic community of to-day. But its scope is not confined to the variety of sympathetic movements which are brought to mind by that loose word radical. In the past fifty years or so, while Socialists and Communists have been denouncing the current processes of economic life in the same invariable phrases and with the same indiscriminating animosity, these processes have been undergoing the profoundest and most interesting changes. While socialist thought has recited its phrases, with witty rather than substantial variations, a thousand times as many clever people have been busy upon industrial, mercantile and financial processes. The Socialist still reiterates that this greater body of intelligence has been merely seeking private gain, which has just as much truth in it as is necessary to make it an intoxicating lie. Everywhere competitive businesses have been giving way to amalgamated enterprises, marching towards monopoly, and personally owned businesses to organizations so large as to acquire more and more the character of publicly responsible bodies. In theory in Great Britain, banks are privately owned, and railway transport is privately owned, and they are run entirely for profit—in practice their profit making is austere restrained and their proceedings are all the more sensitive to public welfare because they are outside the direct control of party politicians.

Now this transformation of business, trading, and finance has been so multitudinous and so rapid as to be still largely unconscious of itself. Intelligent men have gone from combination to combination and extended their range, year by year, without realizing how their activities were enlarging them to conspicuousness and responsibility. Economic organization is even now only discovering itself for what it is. It has accepted incompatible existing institutions to its own great injury. It has been patriotic and broken its shins against the tariff walls its patriotism has raised to hamper its own movements it has been imperial and found itself taxed to the limits of its endurance, "controlled" by antiquated military and naval experts, and crippled altogether. The younger, more vigorous intelligences in the great business directorates of to-day are beginning to realize the uncompleted implications of their enterprise. A day will come when the gentlemen who are trying to control the oil supplies of the world without reference to anything else except as a subsidiary factor in their game will be considered to be quaint characters. The ends of Big Business must carry Big Business into the Open Conspiracy just as surely as every other creative and broadly organizing movement is carried.

Now I know that to all this urging towards a unification of constructive effort, a great number of people will be disposed to a reply which will, I hope, be less popular in the future than it is at the present time. They will assume first an expression of great sagacity, an elderly air. Then, smiling gently, they will ask whether there is not something preposterously ambitious in looking at the problem of life as one whole. Is it not wiser to concentrate our forces on more practicable things, to attempt one thing at a time, not to antagonize the whole order of established things against our poor desires, to begin tentatively, to refrain from putting too great a strain upon people, to trust to the growing common sense of the world to adjust this or that line of progress to the general scheme of things. Far better accomplish something definite here and there than challenge a general failure. That is, they declare, how reformers and creative things have gone on in the past; that is how they are going on now; muddling forward in a mild and confused and partially successful way. Why not trust them to go on like that? Let each man do his bit with a complete disregard of the logical interlocking of progressive effort to which I have been drawing attention.

Now I must confess that, popular as this style of argument is, it gives me so tedious a feeling that rather than argue against it in general terms I will resort to a parable. I will relate the story of the pig on Provinder Island.

There was, you must understand, only one pig on Provinder Island, and Heaven knows how it got there, whether it escaped and swam ashore or was put ashore from some vessel suddenly converted to vegetarianism, I cannot imagine. At first it was the only mammal there. But later on three sailors

and a very small but observant cabin boy were wrecked there, and after subsisting for a time on shell fish and roots they became aware of this pig. And simultaneously they became aware of a nearly intolerable craving for bacon. The eldest of the three sailors began to think of a ham he had met in his boyhood, a beautiful ham for which his father had had the caving knife specially sharpened; the second of the three sailors dreamed repeatedly of a roast loin of pork he had eaten at his sister's wedding, and the third's mind ran on chitterlings—I know not why. They sat about their meagre fire and conferred and expatiated upon these things until their mouths watered and the shell fish turned to water within them. What dreams came to the cabin boy are unknown, for it was their custom to discourage his confidences. But he sat apart brooding and was at last moved to speech. "Let us hunt that old pig," he said, "and kill it."

Now it may have been because it was the habit of these sailors to discourage the cabin boy and keep him in his place, but anyhow, for whatever reason it was, all three sailors set themselves with one accord to oppose that proposal.

"Who spoke of killing the pig?" said the eldest sailor loudly, looking round to see if by any chance the pig was within hearing. "Who spoke of killing the pig? You're the sort of silly young devil who jumps at ideas and hasn't no sense of difficulties. What I said was AM. All I want is just a Am to go with my roots and sea salt. One Am. The Left Am. I don't want the right one, and I don't propose to get it. I've got a sense of proportion and a proper share of humour, and I know my limitations. I'm a sound, clear-headed, practical man. Am is what I'm after, and if I can get that, I'm prepared to say Quits and let the rest of the pig alone. Who's for joining me in a Left Am Unt—a simple reasonable Left Am Unt—just to get One Left Am?"

Nobody answered him directly, but when his voice died away, the next sailor in order of seniority took up the tale. "That Boy," he said, "will die of Swelled Ed, and I pity him. My idea is to follow up the pig and get hold of a loin chop. Just simply a loin chop. A loin chop is good enough for me. It's—feasible. Much more feasible than a great Am. Here we are, we've got no gun, we've got no wood of a sort to make bows and arrows, we've got nothing but our clasp knives, and that pig can run like Ell. It's ridiculous to think of killing that pig. But if one didn't trouble him, if one kind of got into his confidence and crept near him and just quietly and insidiously went for his loin—just sort of as if one was tickling him—one might get a loin chop almost before he knew of it."

The third sailor sat crumpled up and downcast with his lean fingers tangled in his shock of hair. "Chitterlings," he murmured, "chitterlings. I don't even want to think of the pig."

And the cabin boy pursued his own ideas in silence, for he deemed it unwise to provoke his elders further.

On these lines it was the three sailors set about the gratifying of their taste for pork, each in his own way, separately and sanely and modestly. And each had his reward. The first sailor, after weeks of patience, got within arm's length of the pig and smacked that coveted left ham loud and good, and felt success was near. The other two heard the smack and the grunt of dismay half a mile away. But the pig, in a state of astonishment, carried the ham off out of reach, there and then, and that was as close as the first sailor ever got to his objective. The roast loin hunter did no better. He came upon the pig asleep under a rock one day, and jumped upon the very loin he desired, but the pig bit him deeply and septically, and displayed so much resentment that the question of a chop was dropped forthwith and never again broached between them. And thereafter the arm of the second sailor was bandaged and swelled up and went from bad to worse. And as for the third sailor, it is doubtful whether he even got wind of a chitterling from the start to the finish of this parable. The cabin boy, pursuing notions of his own, made a pitfall for the whole pig, but as the others did not help him, and as he was an excessively small—though shrewd—cabin boy, it was a feeble and insufficient pitfall, and all it caught was the hunter of chitterlings, who was wandering distraught. After which the hunter of chitterlings, became a hunter of cabin boys, and the cabin boy's life, for all his shrewdness, was precarious and unpleasant. He slept only in snatches and learned the full bitterness of insight misunderstood.

When at last a ship came to Provinder Island and took off the three men and the cabin boy, the pig was still bacon intact and quite gay and cheerful, and all four castaways were in a very emaciated condition because at that season of the year shell fish were rare, and edible roots were hard to find, and the pig was very much cleverer than they were in finding them and digging them up—let alone digesting them.

From which parable it may be gathered that a partial enterprise is not always wiser or more hopeful than a comprehensive one.

And in the same manner, with myself in the rôle of that minute but observant cabin boy, I would sustain the proposition that none of these movements of partial reconstruction has the sound common sense quality its supporters suppose. All these movements are worth while if they can be taken into the world-wide movement; all in isolation are futile. They will be overlaid and lost in the general drift. The policy of the whole hog is the best one, the sanest one, the easiest, and the most hopeful. If sufficient men and women of intelligence can realize that simple truth and give up their lives to it, mankind may yet achieve a civilization and power and fullness of life

beyond our present dreams. If they do not, frustration will triumph, and war, violence, and a drivelling waste of time and strength and desire, more disgusting even than war, will be the lot of our race down through the ages to its emaciated and miserable end.

For this little planet of ours is quite off the course of any rescue ships, if the will in our species fails.

**XVII. — THE CREATIVE HOME, SOCIAL GROUP,
AND SCHOOL: THE PRESENT WASTE OF IDEALISTIC WILL**

HUMAN society began with the family. The natural history of gregariousness is a history of the establishment of mutual toleration among human animals, so that a litter or a herd keeps together instead of breaking up. It is in the family group that the restraints, disciplines, and self-sacrifices which make human society possible were worked out and our fundamental prejudices established, and it is in the family group, enlarged perhaps in many respects, and more and more responsive to collective social influences, that our social life must be relearnt, generation after generation.

Now in each generation the Open Conspiracy, until it can develop its own reproductive methods, must remain a minority movement of intelligent converts. A unified progressive world community demands its own type of home and training. It needs to have its fundamental concepts firmly established in as many minds as possible and to guard its children from the infection of the old racial and national hatreds and jealousies, old superstitions and bad mental habits, and base interpretations of life. From its outset the Open Conspiracy will be setting itself to influence the existing educational machinery, but for a long time it will find itself confronted in school and college by powerful religious and political authorities determined to set back the children at the point or even behind the point from which their parents made their escape. At best, the liberalism of the state-controlled schools will be a compromise. Originally schools and colleges were transmitters of tradition and conservative forces. So they remain in essence to this day.

Organized teaching has always aimed, and will always tend to guide, train, and direct, the mind. The problem of reconstructing education so as to make it a releasing instead of a binding process has still to be solved. During the early phases of its struggle, therefore, the Open Conspiracy will be obliged to adopt a certain sectarianism of domestic and social life in the interests of its children, to experiment in novel educational methods and educational atmospheres, and it may even in many cases have to consider the grouping of its families and the establishment of its own schools. In many modern communities, the English-speaking states, for example, there is still liberty to establish educational companies, running schools of a special type. In every country where that right does not exist it has to be fought for.

There lies a great work for various groups of the Open Conspiracy. Successful schools would become laboratories of educational methods and patterns for new state schools. Necessarily for a time, but we may hope unconsciously, the Open Conspiracy children will become a social élite; from their first conscious moments they will begin to think and talk among clear-

headed people speaking distinctly and behaving frankly, and it will be a waste and loss to put them back for the scholastic stage among their mentally indistinct and morally muddled contemporaries. A phase when there will be a special educational system for the Open Conspiracy seems, therefore, to be indicated. Its children will learn to speak, draw, think, compute lucidly and subtly, and into their vigorous minds they will take the broad concepts of history, biology, and mechanical progress, the basis of the new world, naturally and easily. Meanwhile, those who grow up outside the advancing educational frontier of the Open Conspiracy will never come under the full influence of its ideas, or they will get hold of them only after a severe struggle against a mass of misrepresentations and elaborately instilled prejudices. An adolescent and adult educational campaign, to undo the fixations and suggestions of the normal conservative and reactionary schools and colleges, is and will long remain an important part of the work of the Open Conspiracy.

Always, as long as I can remember, there have been a dispute and invidious comparisons between the old and the young. The young find the old prey upon and restrain them, and the old find the young shallow, disappointing, and aimless in vivid contrast to their revised memories of their own early days. The present time is one in which these perennial accusations flower with exceptional vigour. But there does seem to be some truth in the statement that the facilities to live frivolously are greater now than they have ever been for old and young alike. For example, in the great modern communities that emerge now from Christendom, there is a widespread disposition to regard Sunday as merely a holiday. But that was certainly not the original intention of Sunday. As we have noted already in an earlier chapter, it was a day dedicated to the greater issues of life. Now great multitudes of people do not even pretend to set aside any time at all to the greater issues of life. The greater issues are neglected altogether. The churches are neglected, and nothing of a unifying or exalting sort takes their place.

What the contemporary senior tells his junior to-day is perfectly correct. In his own youth, no serious impulse of his went to waste. He was not distracted by a thousand gay but petty temptations, and the local religious powers, whatever they happened to be, seemed to believe in themselves more and made a more comprehensive attack upon his conscience and imagination. Now the old faiths are damaged and discredited, and the new and greater one, which is the Open Conspiracy, takes shape only gradually. A decade or so ago, socialism preached its confident hopes, and patriotism and imperial pride shared its attraction for the ever grave and passionate will of emergent youth. Now socialism and democracy are "under revision" and the flags that once waved so bravely reek of poison gas, are stiff with

blood and mud and shameful with exposed dishonesties. Youth is what youth has always been, eager for fine interpretations of life, capable of splendid resolves. It has no natural disposition towards the shallow and confused life. Its demand as ever is, "What am I to do with myself?" But it comes up out of its childhood to-day into a world of ruthless exposures and cynical pretensions. We are all a little ashamed of "earnestness." The past ten years have seen the shy and powerful idealism of youth at a loss and dismayed and ashamed as perhaps it has never been before. It is in the world still, but masked, hiding even from itself in a whirl of small excitements and futile, defiant depravities.

The old flags and faiths have lost their magic for the intelligence of the young; they can command it no more; it is in the mighty revolution to which the Open Conspiracy directs itself that the youth of mankind must find its soul, if ever it is to find its soul again.

**XVIII. — PROGRESSIVE DEVELOPMENT OF THE ACTIVITIES
OF THE OPEN CONSPIRACY INTO A WORLD CONTROL AND
COMMONWEAL:**

THE HAZARDS OF THE ATTEMPT

WE have now sketched out in these Blue Prints the methods by which the confused radicalism and constructive forces of the present time may, can, and probably will be drawn together about a core of modernized religious feeling into one great and multifarious creative effort. A way has been shown by which this effort may be developed from a mere propagandist campaign and a merely resistant protest against contemporary militarism into an organized foreshadowing in research, publicity, and experiment in educational, economic, and political reconstructions, of that Pax Mundi which has become already the tantalised desire of great multitudes throughout the world. These foreshadowings and reconstructions will ignore and transcend the political boundaries of to-day. They will continually become more substantial as project passes into attempt and performance. In phase after phase and at point after point, therefore, the Open Conspiracy will come to grips with the powers that sustain these boundaries.

And it will not be merely topographical boundaries that will be passed. The Open Conspiracy will also be dissolving and repudiating many existing restrictions upon conduct and many social prejudices. The Open Conspiracy proposes to end and shows how an end may be put to that huge substratum of underdeveloped, undereducated, subjugated, exploited, and frustrated lives upon which such civilization as the world has known hitherto has rested, and upon which most of our social systems still rest.

Whenever possible, the Open Conspiracy will advance by illumination and persuasion. But it has to advance, and even from the outset, where it is not allowed to illuminate and persuade, it must fight. Its first fights will probably be for the right to spread its system of ideas plainly and clearly throughout the world.

There is, I suppose, a flavour of treason about the assumption that any established government is provisional, and a quality of immorality in any criticism of accepted moral standards. Still more is the proposal, made even in times of peace, to resist war levies and conscription an offence against absolute conceptions of loyalty. But the ampler wisdom of the modern Atlantic communities, already touched by premonitions of change and futurity, has continually enlarged the common liberties of thought for some generations, and it is doubtful if there will be any serious resistance to the dissemination of these views and the early organization of the Open Conspiracy in any of the English-speaking communities or throughout the

British Empire, in the Scandinavian countries, or in such liberal-minded countries as Holland, Switzerland, republican Germany or France. France, in the hasty years after the war, submitted to some repressive legislation against the discussion of birth control or hostile criticism of the militarist attitude; but such a check upon mental freedom is altogether contrary to the clear and open quality of the French mind; in practice it has already been effectively repudiated by such writers as Victor Margueritte, and it is unlikely that there will be any effective suppression of the opening phases of the Open Conspiracy in France.

This gives us a large portion of the existing civilized world in which men's minds may be readjusted to the idea that their existing governments are in the position of trustees for the greater government of the coming age. Throughout these communities it is conceivable that the structural lines of the world community may be materialized and established with only minor struggles, local boycotts, vigorous public controversies, normal legislative obstruction, social pressure, and overt political activities. Police, jail, expulsions, and so forth, let alone outlawry and warfare, may scarcely be brought into this struggle upon the high civilized level of the Atlantic communities. But where they are brought in, the Open Conspiracy, to the best of its ability and the full extent of its resources, must become a fighting force and organize itself upon resistant lines.

Non-resistance, the restriction of activities to moral suasion is no part of the programme of the Open Conspiracy. In the face of unscrupulous opposition creative ideas must become aggressive, must define their enemies and attack them. By its own organizations or through the police and military strength of governments amenable to its ideas, the movement is bound to find itself fighting for open roads, open frontiers, freedom of speech, and the realities of peace in regions of oppression. The Open Conspiracy rests upon a disrespect for nationality, and there is no reason why it should tolerate noxious or obstructive governments because they hold their own in this or that patch of human territory. It lies within the power of the Atlantic communities to impose peace upon the world and secure unimpeded movement and free speech from end to end of the earth. This is a fact on which the Open Conspiracy must insist. The English-speaking states, France, Germany, Holland, Switzerland, the Scandinavian countries, and Russia, given only a not very extravagant frankness of understanding between them, and a common disposition towards the ideas of the Open Conspiracy, could cease to arm against each other and still exert enough strength to impose disarmament and a respect for human freedom in every corner of the planet. It is fantastic pedantry to wait for all the world to accede before all the world is pacified and policed.

The most inconsistent factor in the liberal and radical thought of to-day is its prejudice against the interference of highly developed modern states in the affairs of less stable and less advanced regions. This is denounced as "imperialism," and regarded as criminal. It may have assumed grotesque and dangerous forms under the now decaying traditions of national competition, but as the merger of the Atlantic states proceeds, the possibility and necessity of bringing areas of misgovernment and disorder under world control increase. A great war like the war of 1914-1918 may never happen again. The common sense of mankind may suffice to avert that. But there is still much actual warfare before mankind, on the frontiers everywhere, against brigands, against ancient loyalties and traditions which will become at last no better than excuses for brigandage and obstructive exaction. All the weight of the Open Conspiracy will be on the side of the world order and against that sort of local independence which holds back its subject people from the citizenship of the world.

But in this broad prospect of far-reaching political amalgamations under the impulses of the Open Conspiracy lurk a thousand antagonisms and adverse chances, like the unsuspected gulleys and ravines and thickets in a wide and distant landscape. We know not what unexpected chasms may presently be discovered. The Open Conspirator may realize that he is one of an advancing and victorious force and still find himself outnumbered and outfought in his own particular corner of the battlefield. No one can yet estimate the possible strength of reaction against world unification; no one can foresee the extent of the divisions and confusions that may arise among ourselves. The ideas in this book may spread about without any serious resistance in most civilized countries, but there are still governments under which the persistent expression of such thoughts will be dealt with as crimes and bring men and women to prison, torment, and death. Nevertheless, they must be expressed.

While the Open Conspiracy is no more than a discussion it may spread unopposed because it is disregarded. As a mainly passive resistance to militarism it may still be tolerable. But as its knowledge and experience accumulate and its organization become more effective and aggressive, as it begins to lay hands upon education, upon social habits, upon business developments, as it proceeds to take over the organization of the community, it will marshal not only its own forces but its enemies. A complex of interests will find themselves restrained and threatened by it, and it may easily evoke that most dangerous of human mass feelings, fear. In ways quite unpredictable it may raise a storm against itself beyond all our present imaginings. Our conception of an almost bloodless domination of the Atlantic communities may be merely the confident dream of a thinker whose thoughts have yet to be squarely challenged.

We are not even sure of the common peace. Across the path of mankind the storm of another Great War may break, bringing with it for a time more brutal repressions and vaster injuries even than its predecessor. The scaffoldings and work sheds of the Open Conspiracy may fare violently in that tornado. The restoration of progress may seem an almost hopeless struggle.

It is no part of modern religion to incur needless hardship or go out of the way to seek martyrdom. If we can do our work easily and happily, so it should be done. But the work is not to be shirked because it cannot be done easily and happily. The vision of a world at peace and liberated for an unending growth of knowledge and power is worth every danger of the way. And since in this age of confusion we must live imperfectly and anyhow die, we may as well suffer, if need be, and die for a great end as for none. Never has the translation of vision into realities been easy since the beginning of human effort. The establishment of the world community will surely exact a price --and who can tell what that price may be?—in toil, suffering, and blood.

XIX. — HUMAN LIFE IN THE COMING WORLD COMMUNITY

THE new life that the Open Conspiracy struggles to achieve through us for our race is first a life of liberations.

The oppression of incessant toil can surely be lifted from everyone, and the miseries due to a great multitude of infections and disorders of nutrition and growth cease to be a part of human experience. Few people are perfectly healthy nowadays except for brief periods of happiness, but the elation of physical well-being will some day be the common lot of mankind.

And not only from natural evils will man be largely free. He will not be left with his soul tangled, haunted by monstrous and irrational fears and a prey to malicious impulse. From his birth he will breathe sweetness and generosity and use his mind and hands cleanly and exactly. He will feel better, will better, think better, see, taste, and hear better than men do now. His undersoul will no longer be a mutinous cavern of ill-treated suppressions and of impulses repressed without understanding. All these releases are plainly possible for him. They pass out of his tormented desire now, they elude and mock him, because chance, confusion, and squalor rule his life. All the gifts of destiny are overlaid and lost to him. He must still suspect and fear. Not one of us is yet as clear and free and happy within himself as most men will some day be. Before mankind lies the prospect not only of health but of magnanimity.

Within the peace and freedom that the Open Conspiracy is winning for us, all these good things that escape us now may be ensured. A graver humanity, stronger, more lovely, longer lived, will learn and develop the ever enlarging possibilities of its destiny. For the first time, the full beauty of this world will be revealed to its unhurried eyes. Its thoughts will be to our thoughts as the thoughts of a man to the troubled mental experimenting of a child. And all the best of us will be living on in that ampler life, as the child and the things it tried and learnt still live in the man. When we were children, we could not think or feel as we think and feel to-day, but to-day we can peer back and still recall something of the ignorances and guesses and wild hopes of these nigh forgotten years.

And so mankind, ourselves still living, but dispersed and reconstructed again in the future, will recall with affection and understanding the desperate wishes and troubled efforts of our present state.

How far can we anticipate the habitations and ways, the usages and adventures, the mighty employments, the ever increasing knowledge and power of the days to come? No more than a child with its scribbling paper and its box of bricks can picture or model the undertakings of its adult years. Our battle is with cruelties and frustrations, stupid, heavy and

hateful things from which we shall escape at last, less like victors conquering a world than like sleepers awaking from a nightmare in the dawn. From any dream, however dismal and horrible, one can escape by realizing that it is a dream; by saying, "I will awake."

The Open Conspiracy is the awaking of mankind from a nightmare, an infantile nightmare, of the struggle for existence and the inevitability of war. The light of day thrusts between our eyelids, and the multitudinous sounds of morning clamour in our ears. A time will come when men will sit with history before them or with some old newspaper before them and ask incredulously, "Was there ever such a world?"

THE END
